I. General Description

A. Overview

The Health Psychology Program at UNC-Charlotte offers students an opportunity to obtain their Ph.D. in Health Psychology with a concentration in one of the following three areas: General, Clinical, and Community. As an interdisciplinary program, it has formal links with faculty in other colleges, departments, and programs in the university related to health research, which allows students to receive a multidisciplinary learning experience.

B. Areas of Concentration (programs)

General

This concentration/program emphasizes both basic and applied research examining the biological, psychological, behavioral, social, cultural, and environmental correlates of health and illness. Upon completion, students will have a strong theoretical and methodological background that will allow them to design and conduct research in academic, medical/health, governmental, and private research settings.

Clinical

This concentration/program trains students within the Scientist-Practitioner (Boulder) Model. This program focuses on preventing and treating physical and mental health dysfunction by addressing psychological, behavioral, and social factors that contribute to the onset and progression of these dysfunctions. Graduates may assume positions in academic, medical centers or other medical settings, private practice, or other applied settings. Students in this program are eligible for clinical licensure in North Carolina and other states. The Clinical program is accredited by the American Psychological Association (APA).

Community

This concentration/program emphasizes the social and community factors that lead to healthy outcomes in individuals, and interventions in community systems that create stronger, healthier communities. Students in the community program will develop skills to conduct applied research and implement strategies to effect change in settings or communities that impact the health and well-being of individuals and families. Graduates choosing this concentration will be prepared to assume positions in universities or in a multitude of settings that require skills in applied research (e.g., program evaluation) and/or community intervention.
C. General Program Goals and Philosophy

The Health Psychology Program at UNC Charlotte has as its objectives the training of students who will:

- Develop strong research skills that will enable them to contribute to the science of health and wellness.

- Obtain specific applied skills that will enable them to use knowledge from psychology to better understand disease, dysfunction, and the promotion of healthy lifestyles.

- Obtain educational training and supervised experience with faculty in psychology and related health professions that will enable them to develop an interdisciplinary perspective on health that they can apply to research and/or practice.

- Gain experience working with health practitioners from different fields, enabling them to become active participants in and leaders of multidisciplinary teams that seek to understand and improve health and wellness across disciplines.

- To educate students who will be competitive applicants for academic and research positions. In addition, graduates from the program will be equipped to pursue a wide arrange of career opportunities.

D. Program Model

Health Psychology is a rapidly emerging field of basic and applied research that utilizes principles of psychology to impact health and illness across the lifespan. More specifically health psychology seeks to understand the role that behavior and its physiologic concomitants play in the etiology, treatment, and prevention of physical and mental illnesses, and the promotion of health and wellness (http://www.health-psych.org/AboutWhatweDo.cfm). The biopsychosocial model (see Figure 1) is at the core of health psychology, serving as the foundation for much of the theory building in this area. Although disease onset is typically triggered by physiological changes, the biopsychosocial model implies that the risk for illness, severity of symptoms, time course of illness, and recovery from illness are influenced by a complex matrix of psychosocial factors. Similarly, the promotion of health and wellness relies on knowledge of the interaction of community and social factors with individual physiological and behavioral characteristics. To understand and address these factors effectively, an interdisciplinary approach is essential.

Psychology, the science of human behavior and mental processes, is of critical importance for addressing the health of individuals, families, and communities. The field of psychology is particularly suited to address a wide range of factors that contribute to the health and well-being of people; applied psychologists have typically been trained in the “scientist-practitioner” model, combining expertise in research skills
with specialized intervention skills. At the same time, successful research and practice in health requires collaborative work with professional from multiple disciplines. Consequently, this program’s interdisciplinary focus provides specific training for psychologists to work with researchers and practitioners from multiple disciplines.

Social/Environmental
```

---

**E. Interdisciplinary Content**

The Health Psychology Program includes health research opportunities for students across different age groups. Students also will have opportunities to collaborate with faculty members from a variety of departments and programs involved with health-related research and practice. These partnerships will provide great opportunities for students to engage in interdisciplinary research and education.

**F. Respect for Diversity**

Diversity is one of the top priorities of the Program and of the University. UNC Charlotte is the second most highly diverse institution in the UNC system. Fostering diversity in psychology is also of high priority for APA. We have as our goal to create a diverse academic environment that reflects the priorities of all of these organizations and that enriches each of our experiences in the Health Psychology Program.
G. Program Director Contact Information

Virginia Gil-Rivas, Ph.D.
Associate Professor of Psychology and Health Psychology
Director of Health Psychology Ph.D. Program
Dept. of Psychology, Colvard 4006
University of North Carolina at Charlotte
9201 University City Boulevard
Charlotte, NC 28223-0001

Email: vgilriva@uncc.edu
Webpage: http://healthpsych.uncc.edu/

H. Program Advisory Committee

The Health Psychology Program Advisory Committee consists of 9 faculty and 3 doctoral student members representing each area of concentration (program). Student members are elected by the Health Psychology graduate student body. The faculty members represent all concentration areas of the Program: 2 members from each of the 3 areas, 2 members representing interdisciplinary faculty, and the Director of the Health Psychology Program who chairs the committee. The faculty members are nominated by the Director of the Health Psychology Program after consultation with the different programs and interdisciplinary stakeholders.

The specific duties of the Health Psychology Program Committee include the following:

1. Recommends Program policy and procedures to the Program Director in an advisory role.
2. Ensures that Program policy and procedures are followed.
3. Recommends to the Program Director potential avenues for program development.

I. Other Information

The Graduate School: http://graduateschool.uncc.edu/
Funding Information: http://graduateschool.uncc.edu/funding
Student Resources: http://graduateschool.uncc.edu/current-students

J. Available Resources for Students

A variety of campus resources are available to graduate students. The Graduate School provides considerable information and resources on issues such as housing, financial
aid and competitive awards, and professional development (http://graduateschool.uncc.edu/current-students). For the latter, workshops and/consultation on professional writing, public speaking, curriculum vita development, and mindfulness have been presented (http://gradlife.uncc.edu/). The Counseling Center provides 12 free sessions of individual counseling per academic year and an unlimited number of group therapy sessions (http://counselingcenter.uncc.edu/). The Student Health Center (http://studenthealth.uncc.edu/) provides primary medical care, disease prevention, health education, wellness promotion, and various specialty services to eligible UNC Charlotte students (i.e., those with UNCC health insurance). See http://studenthealth.uncc.edu/general-information/faq for frequently asked questions about the Health Center and eligibility issues. Finally, health insurance is included as part of the Graduate Assistant Support Plan (GASP) funding, but students who are not receiving GASP support may purchase it. The cost of health insurance for 2017-2018 academic year is $1,270.00 (http://studenthealth.uncc.edu/insurance).

The Health Psychology Program provides competitive research grant awards (up to $500 per year) to support students’ research projects. These grants are designed to facilitate and improve students’ research skills and scholarly productivity. In addition, the program provides travel support (up to $500 per year) for students who are presenting their work at professional conferences. Please review travel guidelines as you consider requesting funding from the Program (http://healthpsych.uncc.edu/current-students-and-faculty). Finally, summer research fellowships are provided on a competitive basis (on average 3 fellowships are awarded per year) to support research (other than research related to programmatic milestones). Fellowship recipients are selected by a faculty committee that reviews all student applications. This faculty committee is appointed by the Program Director on an annual basis.

II. Advising

A. Primary Academic Advisor

An advisor will be assigned to you by the Program Director before classes begin in the fall semester of your first year. The advisor will be determined by the Director after consulting with you and the faculty member who may act as your primary advisor. The advisor will be the chair of your advisory committee (see below). Your primary advisor will work with you principally on research. Your primary advisor must be a core member of the Health Psychology Faculty and be a regular member of the UNC Charlotte Graduate Faculty.

Your advisor is very important to your career because your own program of research will be shaped by whom you decide to work with. In addition, a letter from a highly regarded advisor can open professional doors for you. Your advisor is likely to be the person who will know your work best and thus can be a professional advocate for you and help you excel in your own work during your graduate training.
Students may change primary academic advisors during their residence in the program. The student should discuss the proposed change with his or her current advisor and the Director of the Health Psychology Program prior to seeking formal approval of this change. The Director will need to formally approve any changes in primary advisor.

Please note that most faculty members have a 9-month appointment, as such, their availability over the summer is likely to be limited. Make sure to talk with your advisor about her/his expectations for the summer.

Responsibilities of the Primary Academic Advisor:

- Your primary advisor is the Chair of the advisory committee (see below). As such, your advisor will lead and convene all committee meetings and provide final approval for all programmatic decisions and milestones.

- Your advisor has primary responsibility for guiding you in the completion of the second year project.

- Your advisor will be the one who will direct your studies and regularly monitor your progress in the Program.

- Your advisor is the point person for all decisions regarding your coursework and qualifying project (Comps). It is assumed your advisor will chair your dissertation committee.

B. Advisory Committee

You will need to assemble an advisory committee during the Fall semester of your first year in the Program. The Program Director must formally review and accept the composition of each student’s committee (see Appendix). At a minimum, students are expected to meet with their advisory committee once per academic year to discuss their progress in the program.

Your primary advisor can be very helpful as you develop this committee. Approach potential members and discuss your professional goals with them prior to asking them to serve.

Composition of the Advisory Committee:

- The advisory committee includes at least three members, two graduate faculty members with training in Psychology and one interdisciplinary faculty member from disciplines other than psychology (e.g., public health, nursing, sociology, etc.). The interdisciplinary member does not need to be formally affiliated with the Health Psychology Program; however, they should have Graduate Faculty status at UNC Charlotte.
Responsibilities of the Advisory Committee:

- In collaboration with your primary advisor, your committee will guide you in selecting graduate courses that will meet Program requirements as well as help you reach your professional goals. Your advisory committee can be particularly helpful in the process of selecting interdisciplinary courses.

- In collaboration with your primary advisor, members of your advisory committee will review your academic transcripts to determine what courses might be eligible for transfer.

- The advisory committee will be involved in reviewing programmatic activities and milestones. The primary advisor will act as the point person for all decisions.

Students may change the members of their advisory committee during their residence in the program. The student should discuss the proposed change with his or her current advisor and the Director of the Health Psychology Program prior to seeking formal approval of this change. Students should communicate this decision to the committee member they are seeking to replace. A new Student Advisory Committee form (See Appendix) will need to be submitted to the Program Director for her/his formal approval of this change.

C. Dissertation Committee

You will need to assemble a dissertation committee upon successful completion of your Comprehensive Project (Comps). Your primary advisor may serve as the chair of your dissertation committee. Likewise, members of your advisory committee may also serve as members of your dissertation committee. However, you are free to form a dissertation committee that does not include members of your advisory committee. You need to consult with your primary advisor regarding the composition of this committee. Please note that all members of your dissertation committee need to be regular members of the UNC Charlotte Graduate Faculty. The dissertation committee needs to be approved by the Director of the Health Psychology Program and by the Graduate School.

Composition of the Dissertation Committee

- The dissertation committee will consist of at least four Graduate Faculty members, one of whom is appointed by the Dean of the Graduate School as the Graduate Faculty representative.

- The chair of the dissertation committee must be a core member of the Health Psychology Faculty and be a regular member of the Graduate Faculty at UNC Charlotte.
Responsibilities of the Dissertation Committee Chair:

- The Chair of the dissertation committee will be the person who takes the lead in working with you on: 1) the development of your research project; 2) the development of your proposal; 3) implementation of your dissertation project; and 4) the completion of the written component of your dissertation. The Chair will regularly monitor your progress with dissertation-related work.

- The Chair of the committee will lead and convene all dissertation committee meetings and provide final approval of your work.

- The Chair is the point person for all decisions regarding your dissertation work and final written document.

Responsibilities of the Dissertation Committee Members:

- In collaboration with the Chair of your committee, committee members will assist you in the development of your dissertation proposal and carrying out your dissertation project.

- The members of the dissertation committee will be involved in reviewing the dissertation work and issuing recommendations regarding your progress and successful completion of your dissertation.

D. Program Faculty

Core Faculty

Laura Armstrong  Psychology  
My primary research interests are in the area of early childhood mental health. Broadly, I am interested in the role of family risk and parenting behaviors in the development of child emotion regulation during the toddler and preschool years. This has led to two interrelated lines of research focused on: (a) understanding how young children develop the ability to use language as a way to effectively manage negative emotions and how certain child-rearing environments (e.g., parental psychopathology, poverty) may compromise this process; and (b) examining how cognitions among low-income parents (e.g., cognitive complexity, mind-mindedness, parenting self-efficacy and locus of control) as well as child and family functioning influence parents’ ability to promote self-regulatory skills in their preschool-age child. My long-term goal is to refine intervention targets for low-income families raising young children.

Jeanette M. Bennett  Psychology
Broadly, the underlying concept driving my research is that bidirectional neuroendocrine-immune communication occurs constantly to increase survival and maintain balance or homeostasis. This communication can be influenced by psychological (e.g., stress, depression), biological (e.g., sex, drug use, age), and
psychosocial (e.g., socioeconomic status, social support) factors which ultimately affect overall health. Specifically, I study the effects of stress (psychological and pharmacological) on neuroendocrine and immune systems across the lifespan in healthy and clinical populations.

Jaime Bochantin  Communication Studies  
My research involves the cognitive, physical, and emotional health and well-being of organizational members. Current research examines the intersection between work and life, stress and well-being, burnout, organizational conflict and negotiation, and workplace mistreatment including incivility and bullying. While mostly applying a qualitative/interpretive lens to the research, I also have experience in quantitative analysis. Furthermore, one specific population I spend my time examining are members of the public safety profession (i.e. police officers and fire fighters). Specifically, I research stress and burnout over the career length. I have also examined the aging, female professional and their experiences in dealing with menopause and aging in the workplace.

Fary Cachelin  Psychology  
Disordered eating, dieting, and obesity in women and men of diverse ethnicities; treatment seeking and barriers to health care utilization in under-served and under-represented populations.

Andrew Case  Psychology  
My research focuses on the psychology of marginality and resilience with specific attention given to the experiences of African Americans and Black immigrants. Through one line of inquiry, I examine marginality as a social-structural determinant of health and life outcomes, identifying the specific pathways through which minority status adversely impacts physical and psychological health in adults and educational attainment and justice system-involvement in youth. Through another line of inquiry, I examine how individuals collectively resist marginality and enhance their wellbeing. I use the Counterspaces Framework to identify settings (e.g., churches, cultural organizations) and the setting processes within them (e.g., narrative identity work, social support) that foster resilience to racial marginality. To better illuminate the transactions between these settings and the persons who participate in them, I routinely employ context-sensitive approaches and methodologies including PAR/CBPR, participant observation, document analysis, and interviewing. As a community psychologist I hold a deep commitment to transformation; ultimately, I seek to use my research and consultation activities to enhance the social-structural conditions that precipitate favorable outcomes for racial/ethnic minority individuals within health, education, and justice systems.

Maren Coffman  School of Nursing  
Health literacy, diabetes, depression, and health care access in Latino immigrants.
Amy Canevello  
Psychology  
My research investigates the dynamics of close relationships and is driven by a simple, but powerful assumption: people create what they experience through the goals and motives that drive their behavior. My research addresses questions such as: When and how do we create upward and downward spirals in our relationships with others?; How do we contribute to our own and others’ experiences?; What does it mean to have good relationships and how can we create them for ourselves and others? What are the benefits of giving to vs. receiving from others? What are the physiological correlates and health-related consequences of these processes?

Jim Cook  
Psychology  
My area of research is community psychology, which focuses on changing systems and settings to better meet the needs of individuals and families. With a strong emphasis on community-based participatory research (CBPR), my faculty and student colleagues and I work with community groups as partners. We work together to develop research questions, collect data, and use the knowledge gained to improve the community. Examples of current partnerships (with Ryan Kilmer) include: evaluation of a major children's mental health initiative; evaluation of family support programs within both mental health and child protective services (CPS); pilot efforts to improve social workers’ ability to identify and meet the mental health needs of youth in CPS; evaluating efforts to increase school readiness and skills for young children. Through working with these programs to evaluate their impact, we help them improve their ability to help children and families.

Chris Davis  
Communication Studies  
The intersection of communication and family disability, aging, and chronic and terminal illness, especially in the areas of children's mental health, women and aging, social support, mental health literacy, family disability, and narrative ethnography and autoethnography.

George Demakis  
Psychology  
Neuropsychological correlates of Parkinson's disease, recovery from traumatic brain injury, and meta-analysis, detection of malingering, and competency evaluation (both civil and criminal).

Mark Faust  
Psychology  
Do we have the ability to completely stop mental processes associated with a task when we switch to perform a new task?

Jane Gaultney  
Psychology  
Cognition and behavior in children with sleep disorders; the effect of sleepiness on children.

Virginia Gil-Rivas  
Psychology  
Development and evaluation of brief behavioral and psychological interventions aimed at changing health behaviors (e.g., problem eating, exercise) among vulnerable
populations. Cognitive, emotional, and social factors associated with individuals’ psychological adjustment and quality of life following exposure to major stressful events (e.g., disasters, loss of a loved one, chronic illness). Factors associated with health-behavior change and maintenance across the lifespan.

Andrew Harver  
Public Health Sciences
My research program results from a blend of training and interests in experimental psychology, respiratory physiology, and pulmonary medicine to examine factors that affect the perception of dyspnea, or shortness of breath, in patients with asthma and COPD as well as the impact of these factors on the management of disease.

Rosemary L. Hopcroft  
Sociology
Cross-national differences in depression and depression symptoms. Evolution and Sociology, Theory, Comparative and Historical Sociology.

Susan Johnson  
Psychology
Neuropsychology of Multiple Sclerosis, efficacy and prevalence of alternative and complementary medicine, and biopsychosocial approaches to unexplained illness.

Ryan Kilmer  
Psychology
I am a child clinical-community psychologist and work with faculty and students on a host of applied research efforts in community psychology. My interests include: (a) factors influencing the development of children at-risk for emotional, behavioral, and/or academic difficulties, particularly risk and resilience and youngsters’ adjustment to trauma; and (b) the use of research to guide service delivery, evaluate service and program effectiveness, and inform system change, program refinement, and policy. I collaborate regularly with Jim Cook on work with a range of community partners reflecting different disciplines (e.g., mental health, education, health, child welfare). I have directed or co-directed NIH-funded projects involving children exposed to adversity and at-risk youth, and co-direct a large-scale evaluation of the implementation and impact of a child mental health service delivery model, as well as evaluations of family support programs in mental health and child welfare contexts, and two community initiatives to increase school readiness. We have used project data from work with various populations with mental health needs to detail needs for services and supports (and the impact of unmet needs), frame recommendations for service system change, and discuss warranted policy modifications and their implications.

Othelia Lee  
Social Work
Gerontology, health promotion and cultural diversity.

Sara Levens  
Psychology
My research examines emotion, executive control and decision making. In particular, I am tracking the emotion-cognition process—from underlying emotion processing and executive function interactions in working memory to downstream emotional decisions and behaviors. I utilize a range of methodologies including: functional magnetic resonance imaging (fMRI), Diffusion tensor imaging (DTI), behavioral genetics, lesion
research, clinical populations, and standard behavioral research. I use the aforementioned methodologies with multiple samples of participants to gain a comprehensive understanding of the cognitive and biological mechanisms that underlie emotion processing, cognition and decision-making.

**Tierney Lorenz  Psychology**

My research examines the interactions among sex and sexuality, mental health, and physical health in women. There is strong evidence that mental, physical and sexual health are linked and yet, because their interplay is complex, there are still many unknowns. Can inflammation be the common cause of sex differences in depression, heart disease and chronic pain? How does information about our social and sexual relationships change how our body interprets immune threats? How do psychological interventions change the fight-or-flight response to sexual behavior in women with a history of childhood sexual abuse? What causes antidepressant sexual side effects, and how does antidepressant use change neural activity during reproductive transitions (puberty, postpartum, or menopause)? To answer these and other questions, my work uses methods from multiple fields, including measures of hormones and immune markers, psychophysiological measures of sexual and autonomic arousal, neural imaging, clinical trials, surveys and interviews. One line of my research considers how the interaction of sexual behavior and immunity may influence women's mental and physical health. Across these studies we are finding that women's bodies respond differently to immune challenges if they are sexually abstinent vs. sexually active. We are now following up on that research, looking for the mechanisms by which sexual activity impacts immune function. Another line of this research is measuring the effects of childhood sexual abuse on interactions between the endocrine and autonomic nervous system response to stress in adult survivors, including how sexual abuse may influence women's immune responses to sexual activity. In the other direction, I examine how physical and mental health conditions impact women's sexual and relationship function. In this track, we are mapping out the etiology and treatment of antidepressant sexual side effects, and examining how treatment for gynecologic cancer influences women’s ongoing sexual wellbeing.

**Rick McAnulty  Psychology**

Sexual behavior, sexual misconduct, and sexual offending (including pedophilia). Dating and intimacy, including factors related to relationship satisfaction and dissatisfaction.

**Erika Montanaro  Psychology**

HIV prevention often begins with a targeted behavior, for example, a young woman negotiating condom use with her partner. It is important to understand what factors contribute to HIV risk behavior in order to create effective interventions. Additionally, HIV disproportionately impacts young minority populations. To that end, the goal of my research program is to integrate theory, advanced analytic techniques, and technology to develop and assess innovative and impactful interventions to decrease HIV transmission rates in at-risk minority health communities.
Amy Peterman  Psychology
My research interests center on developing a deeper understanding of the role played by psychological and behavioral factors in the socioeconomic gradient of health. I am also very interested in the role that health psychology interventions, including those delivered in primary care settings, can play in minimizing SES-related health disparities.

Sharon Portwood  Public Health Sciences
Research that reflects an integration of law, developmental psychology, and community psychology applied to a broad spectrum of issues involving health and human services and policy, particularly as they impact children, youth, and families.

Margaret Quinlan  Communications
My primary scholarly interests lie in the intersections between health and organizational communication. Drawing on narrative and feminist sensibilities, my work focuses on a range of social justice issues that affect marginalized populations including disability-rights and gender inequities. My research strengths are in interpretive/ethnographic, critical and rhetorical methodologies.

Charlie Reeve  Psychology
Application of the quantitative methods of the science of mental abilities to better understand how individual differences in intellectual capacities influence health, health behavior and religious beliefs; psychometrics (i.e., measurement theory).

Victoria Scott  Psychology
As a community psychologist, I work across settings and ecological levels (e.g., individual, program, organizational, community) to promote collective wellness using strength-based approaches. My interests relate primarily to capacity building and the processes involved in spreading capacities across systems to elevate social impact. I am passionate about working with health care systems and community organizations. With a commitment toward bridging the gap between research and practice, I am continuously working to bring the fruits of our research into the hands of practitioners.

Shannon Sullivan  Philosophy
She teaches and writes in the intersections of feminist philosophy, critical philosophy of race, American pragmatism, and continental philosophy.

Rich Tedeschi  Psychology
Predictors, correlates, and consequences of posttraumatic growth, i.e., the experience of positive change that can emerge from the struggle with a highly stressful event (with Lawrence Calhoun).

Michael Turner  Kinesiology
Cardiovascular function, physical activity and aging. Specifically, my laboratory is working to understand the mechanisms influenced by regular physical activity that impact the functioning of our aging hearts. The mechanisms that influence the age-related decline in physical activity is also a large area of study for my laboratory. Lastly,
my laboratory is investigating the influence of orthopedic factors (i.e., chronic ankle instability) that reduce lifelong physical activity levels causing the development of cardiac dysfunction and other hypokinetic disease characteristics.

**Jennifer Webb**  
**Psychology**  
My research centers on studying the positive psychology of eating, body image, and weight with an emphasis on ethnic minority women during the developmental period of emerging adulthood. Her research has focused on clarifying the biopsychosocio-cultural determinants of body composition changes during the first-year college transition in African American and European American women. Other research interests include the health impact of weight-related stigmatization along with the psychoneuroendocrinology of appetite, eating, metabolism, and weight. Future investigations will integrate mindfulness- and self-compassion-based approaches to promoting positive body image, eating, and weight regulation among ethnically-diverse first-year college women.

**Auxiliary Faculty**

**Lyndon Abrams**  
**College of Education**

**Joanne Carman**  
**Political Science and Public Administration**

**Christine Elnitsky**  
**School of Nursing**  
Veteran health and facilitating veteran transition.

**Michele Issel**  
**Public Health Sciences**  
Community-based perinatal services, Medicaid prenatal case management, program evaluation, public health workforce development, public health nursing, dosage of community interventions.

**Julian Montoro-Rodriguez**  
**Gerontology Program**  
Gerontology and parenting.

**Shanti Kulkarni**  
**Social Work**  
Domestic violence theory and services (including dating violence), adolescent childbearing, families in poverty, and women’s health.

**Crystal Piper**  
**Public Health Sciences**  
To examine the factors and health behavioral characteristics of disparities in chronic/infectious diseases and disease management among minority and vulnerable populations, and develop policy and practice recommendations to improve the quality of health care delivery systems for these special populations.

**Lisa Rasmussen**  
**Philosophy**  
Research ethics (responsible conduct of research), medical ethics, and moral philosophy.
III. PROGRAM REQUIREMENTS

A. Minimal program requirements for successful completion:

- Students are admitted for full-time study.
- Students are required to maintain continuous enrollment (at least 3 credit hours per semester; fall and spring). Students who fail to maintain ongoing enrollment will need to apply for reinstatement.
- Required Graduate Hours:
  - General concentration/program: At least 78 post baccalaureate hours.
  - Clinical concentration/program: At least 88 post baccalaureate hours.
  - Community concentration/program: At least 78 post baccalaureate hours.
- The majority of the coursework will be at the 8000 level.
- Students will develop a plan of study with their advisory committee.
- Successful completion of a second year research project (students who have completed a master’s thesis prior to entering the program can request that their second year research project be waived; see below for details).
- Successful completion of a practicum.
- Successful completion of a Comprehensive Project (Comps) prior to being admitted to candidacy. Students in the clinical program are also required to complete a Comprehensive Clinical exam.
- Successful completion of a dissertation project.
- A year-long pre-doctoral clinical internship (clinical concentration/program only).

B. Minimal levels of acceptable achievement:

- A grade of “B” or better is the minimal level of achievement for courses designated as “core” by the Program and the student’s area of concentration/program. Students
who are unable to obtain this level of achievement will be required to re-take that course. If a student is unable to meet the grade requirement after the second attempt, s/he will be discharged from the Program. In addition, students are allowed to withdraw from a “core” course on one occasion. Please note that the Graduate school guidelines (https://catalog.uncc.edu/content.php?catoid=19&navoid=1119) allow students to repeat a maximum of two courses in which the student was assigned a grade of C or U. A given course may be repeated one time only.

- For students in the clinical concentration/program the minimal level of achievement on each of their practicum placements is a rating of at least “Satisfactory” on the final, overall evaluation item (i.e., —Overall performance during this evaluation period). If the overall rating is less than “Satisfactory”, the DCT will meet with the site clinical supervisor, the faculty practicum instructor and the student to discuss the specific areas of deficiency and to develop an individualized plan to address them. One of the licensed clinical faculty members will be chosen to work individually and intensively with the student on the problem areas. Repetition of clinical coursework may be required. The need for continued remedial work will be evaluated at the end of each subsequent semester or more frequently if requested by the student. The clinical faculty will discuss the student’s progress in the end-of-semester student evaluation meeting and will jointly determine readiness to continue practicum.

- Termination may be appealed to the Program Director and the Dean of the Graduate School.

The procedures outlined above do not replace the Graduate School guidelines regarding grade expectations for students. Specifically, students who earn 2 marginal (“C”) grades or a grade of Unsatisfactory in any graduate coursework will be suspended from the University. A student who is suspended because of grades is ineligible to register in any semester or summer session unless properly reinstated (see Graduate Catalog https://catalog.uncc.edu/content.php?catoid=19&navoid=1119). In addition, students must successfully complete all program milestones in order to meet the program requirements.

C. Professional competency

Procedures for students who do not meet professional practice competency standards

Program faculty is responsible for the monitoring and evaluation of student performance in all areas and to ensure appropriate professional development. Procedures for dealing with students’ performances in areas such as meeting program milestones and coursework are discussed in the section below. The current procedures refer only to student’s performance in professional practice areas such as practicum, teaching, research assistantship, etc. A student who does not perform competently (i.e., appropriately and effectively) in these areas may be discharged from the Program. In
the situation in which a faculty member or any other supervisor (i.e., clinical, teaching, etc.) believes this to be the case, the procedures listed below will be followed.

- The faculty member will meet with the Program Director to advise and inform them of the situation. For issues relevant to clinical practicum work, the faculty member should first meet with the Director of Clinical Training (DCT).

- Program Director and/or DCT will consult with other faculty as necessary, including the student's advisor, to obtain information about the student's performance. For a clinical student, the instructor of Practicum in Clinical Psychology (PSYC 8450) would also be involved. The DCT and/or Program Director will also meet with the student to obtain additional information and the student's perspective on the situation.

- In consultation with relevant faculty, the Program Director and/or DCT will develop a written report based on all the information presented. This might include one or more of the following:
  - Develop, plan, and implement a remediation program with benchmarks for success/progress.
  - Referral for appropriate professional assistance and/or evaluation.
  - Recommend a leave of absence from the program to resolve the problem (usually one semester or one year long).
  - If the issue warrants termination from the Program, the Program Director will follow the termination procedures described in the following section.

- At the end of the remediation program or leave of absence, the Program Director and/or DCT will gather relevant information, meet with the student and other faculty to determine if the problem has been resolved, if the student met the benchmarks specified for improvement, and, ultimately, whether they are able to perform competently. If, based on program faculty input and the judgment of the Program Director the student is still not able to perform as expected the Director will recommend the student's termination to the Graduate School (see Termination procedures below).

- If, at any point, during this process, the student fails to comply with any of the requirements of remediation/rehabilitation, the Program Director may initiate the termination procedures. Please see the UNC Charlotte Graduate Catalog for additional information.

D. Time limits for completion of program:

- Students are expected to complete their course work within the timeline described below.

- Full-time students must meet benchmark requirements (see timeline that follows) each year to maintain their status as a doctoral student.

- Students entering the doctoral program must successfully defend their dissertation within eight years from admission. Students who exceed the
eight year timeline will need to apply for course revalidation. **Course revalidation involves obtaining a grade of “B” or better on the final exam or project for the course in question. Please note that no more than 25% of the courses on a student’s program of study may be revalidated, and no course older than ten years may be revalidated. Courses that are older than 10 years will need to be retaken.** See graduate school guidelines (https://catalog.uncc.edu/content.php?catoid=19&navoid=1119).

E. Programmatic expectations:

**Research:** The Health Psychology Program places a strong emphasis on research and expects that students will be actively involved in research throughout their enrollment in the program.

**Professional Involvement:** Membership by students in professional organizations is strongly encouraged. There are a variety of professional organizations such as Divisions 38 (Society for Health Psychology), 50 (Addictions), 54 (Pediatric Psychology), 27 (Society for Community Research and Action) of the American Psychological Association, Society of Behavioral Medicine, and The American Psychological Society among others. Student travel funds may be available for travel to such professional conferences, especially if you are an author on a paper presented at that conference. The request for travel funds form is located in the Appendix.

**Teaching:** For students interested in academic positions, teaching is an important skill to develop as part of training in the program. Please see guidelines for graduate student teaching in subsequent sections.

**Programmatic Milestones**

All students are expected to complete certain programmatic milestones to demonstrate satisfactory progress toward graduation (see below).

**Timeline for completion of milestones**

Clinical Students apply for internship | Clinical Students successfully defend their dissertation and graduate

NOTE. The timeline for completion of programmatic milestones will be adjusted based on students’ academic accomplishments at program entry. For students entering the Program with a graduate degree in psychology or related discipline and who have successfully completed a thesis, they will be expected to successfully complete their Comprehensive Project (Comps) by the end of the spring semester of their second year of training and to successfully propose their dissertation by the third year of their doctoral training. Extension decisions will be made on a case-by-case basis. The timeline above is ideal for all students and is expected for those in the community and general concentrations. Because students in the clinical concentration are engaged in 16-20 hours/week of clinical practica every semester beginning in the second year, they may have one semester extension to complete their second year project (Fall of 3rd year). With this in mind, you want to begin planning for your second year project during the spring of your first semester in the program. The practica requirement may also extend time to graduation for clinical students (5 to 6 years). Students should remain in ongoing communication with their advisory committee, the DCT, and the Program Director regarding their timeline for program completion. Importantly, please keep in mind that students have priority for funding during their first 4 years of their tenure in the program assuming that they meet eligibility requirements (GPA and enrollment). Student funding beyond the 4th year in the program will depend on availability.

Second Year Research Project

The second year project is meant to immerse students in a practical research experience that will help them develop skills to conduct independent research projects. Students are expected to develop and carryout this project under close supervision from their primary academic advisor. Completion of this project entails:

1) Development of a research proposal under the supervision of your primary mentor. The proposal should include the following sections: a) review of the literature; b) research questions or hypotheses; 3) methods; and 4) plan of analysis.

2) A formal proposal meeting with your advisory committee that includes a brief presentation of the proposed project.

3) A manuscript that follows the format of typical empirical articles in psychology and should be turned into your primary advisor and members of your advisory committee.
The manuscript should include the following sections: a) review of the literature; b) research questions or hypotheses; c) methods; d) plan of analysis; e) results; and f) discussion. The manuscript should be sent to the member of your advisory committee at least two weeks prior to your formal defense.

4) A defense of your project which includes an oral presentation in front of your advisory committee. The presentation is expected to be approximately 30 minutes in length and should summarize the main findings and the contribution of the study to Health Psychology. Students in the general and community concentrations are expected to complete this milestone during the spring semester of their second year of training. Students in the clinical concentration may have a one-semester extension to complete their second year project (end of fall semester of 3rd year) given their clinical practicum requirements. Requirements for a second year project can be waived if the student has successfully defended a research-oriented graduate thesis in his/her previous academic work that meets program expectations. Each member of the student’s advisory committee is required to evaluate the student’s project as part of the Program’s Evaluation of Student Learning Outcomes (see the Appendix). The completed evaluations are submitted to the program Director. Students are expected to achieve a score of acceptable or better in each of the domains evaluated. Written revisions or a repeat of the oral presentation will be required if this score is not achieved.

Comprehensive Qualifying Project (Comps)

Comprehensive qualifying projects are meant to demonstrate broad competence as a scholar in the disciplines of health psychology and the concentration-specific discipline (clinical, community, or general). The Comprehensive Qualifying Project results in a practical product that demonstrates integration of knowledge from these areas. In addition, it provides an opportunity to strengthen and develop a student’s skills, as specified by his/her primary academic advisor and members of the advisory committee. Projects are identified via a collaborative process, involving the student and his/her primary academic advisor and advisory committee. The Comprehensive Project acts as the gateway into the 4th year of training and dissertation. Students must complete their Comprehensive Project successfully to continue in the program.

Each student’s advisory committee, in consultation with the Director of the Program, tailors the content and format of the Comprehensive Project with attention to the student’s professional goals. The student’s primary academic advisor is expected to take the lead in providing consultation and feedback related to the development and successful completion of the project. The Comprehensive Project must result in a tangible product that will benefit the student professionally. As such, traditional written “comprehensive exams” are not appropriate.

The prime emphasis of the Comprehensive Project is a significant written component. This element must yield a product at the doctoral student level and of sufficiently high quality that it fully satisfies the requirements of the examination; it must represent
competent professional work. The process of the Comprehensive Project will enable students to:

a) Gain a better understanding of perspectives that extend beyond their specific area(s) of interest

b) Integrate the knowledge they gain in research methods, statistics, and other courses

c) Bridge the gap between identifying a research idea/question and designing a project that allows them to adequately examine their questions of interest

The Comprehensive Project process will include three main components listed below. In addition students should adhere to the following guidelines:

1. **A formal proposal meeting prior to starting the project is required**, regardless of the option chosen. A copy of the proposed project should be provided to the members of the student’s advisory committee at **least 2 weeks prior to the proposal meeting**. The proposal meeting should include a 30 minute presentation of the proposed project. It is possible that the committee will stipulate additional requirements to ensure that the proposed project meets the goals identified above. For example, students completing a grant proposal may be asked to write a more comprehensive background and significance section than allowed by a particular grant mechanism.

2. **A formal proposal defense**: The written project described below will be submitted to the student’s advisory committee **at least 2 weeks prior to the defense** for their review. The defense includes an oral presentation (see details below).

3. The Completed **Qualifying Examination form** should be submitted to the Graduate School (http://graduateschool.uncc.edu/current-students/forms) upon completion of the formal defense.

A. **Written Project**

The written project should take the form of a grant proposal, program evaluation, a manuscript based on an original empirical study, or a literature review. Details for each option are below.

1) **Grant proposal**: The process of developing a grant proposal (a) integrates multiple learning goals and (b) is a highly marketable skill that will enhance students’ development and professional options. The proposal will need to involve an area relevant to the general domain of Health Psychology. The length of the proposal will be determined by the requirements of the grant mechanism targeted by the project and will be written in the style required by granting agency (i.e., PHS, NIH, or NSF style).

2) **Program evaluation**: For a program evaluation to be eligible as a Comprehensive Project, the student must demonstrate significant involvement at every stage – from
development to implementation, from analysis to write-up. Projects on which faculty members are principal investigators of grants or contracts are eligible; however, the student must clearly assume a lead role in meeting and communicating with stakeholders, defining the methodology and approach, and coordinating the evaluation. In addition, students would maintain primary responsibility for data collection and/or management, analyses, and the preparation of the evaluation report. Such program evaluations allow students to integrate their background and skills in applied research methods to address ‘real world’ concerns.

3) Empirical study: Students have the option to design, implement, analyze and prepare a manuscript based on an original research project in an area relevant to Health Psychology. The research project should be of high quality with the goal of being submitted to a peer-reviewed journal. The project cannot simply be a write-up of the second year project or master’s thesis. It may, however, be an original extension of either of those projects. Students choosing this option will likely have completed a master’s thesis prior to entering the program and would begin working on this project at least by the beginning of their second year.

4) Literature review: For a literature review to be eligible as a Comprehensive Project, the review would need to be a theoretical and conceptual work, and could take the form of an evaluative, integrative, meta-analytic or systematic review of a substantive issue in the general domain of Health Psychology. Theory-based reviews of empirical contributions that afford integrative theoretical formulations of work in Health Psychology or reviews of developments that develop connections between areas of research within Health Psychology and other disciplines would be required (similar to publications in Psychological Bulletin). The quality of the review should make it eligible for publication in a peer reviewed journal.

B. Brief Integrative Paper

In order to demonstrate a broad integration of knowledge in the field of Health Psychology, all Comprehensive Projects must include a 5 – 8 page paper integrating the topic of their project into the broader field of Health Psychology. Such a paper could consider the significance of the project for the field, discuss the project’s broader health relevance, and reflect the means by which the student’s academic training informed and guided the work.

A and B must be evaluated as “Passed”, as decided by a meeting of the student’s advisory committee, before the end of the third year of study. Once passed, the Oral Presentation will be scheduled. If a student fails A/B, he/she has one opportunity to re-do this portion of the comprehensive project. The redo of A/B and the Oral presentation must be completed by the end of August of the fourth year of training.
C. Oral Presentation

The Comprehensive Project also includes an oral component. The oral presentation requires that the student present their written product to the Advisory committee and, when relevant, to other stakeholders invited by the Advisory Committee. Students must also be prepared to answer questions in an open forum. Questions asked during/following the presentation may relate not only to the specific project being presented, but topics and issues in Health Psychology more broadly, as well as the student’s specific area of concentration. Thus, this presentation provides an additional opportunity for students to demonstrate their understanding and grasp of program material; integrate and synthesize data from a diverse array of sources; and convey appreciation of salient issues in their field and, more globally, Health Psychology. The presentation should include a discussion integrating the integrative paper (part B of the Comps).

Timeline

Students must have at least a 3.0 GPA, must not be on programmatic probation, and must have removed any conditions placed upon them at the time at admission to the program prior to initiating their Comprehensive Project. **Comprehensive Projects should be completed no later than the third academic year in the program.** Ideally, a student should choose an option from A in the first month of their third year. Comprehensive Projects must be completed successfully before students may propose their dissertation project.

Evaluating the Comprehensive Project

**Written product (A) should include:**

*Statement of problem:* problem is well-defined, well-grounded and is applicable to populations beyond that to be studied. There is abundant and compelling evidence provided to support the significance of the problem. The proposed approach is rigorous with some unique characteristic(s).

*Background:* Extensive review that includes summaries, synthesis, and critiques of exceptionally rigorous evidence-based sources that strongly supports the statement of the problem and all the components of the methodology.

*Method:* The elements of methodology are both appropriate for the problem under study and represent the quality necessary for publication. Reliability (or consistency) and validity (or accuracy of measurement) have been firmly established for methods employed.

*Analysis:* Reports data analyses with a level of clarity and accuracy necessary for funding or publication.
Implications: Conclusions are accurate, appropriately linked to the problem and methodology. Implications for practice and future research are compelling in their potential applications. Conclusions add to the knowledge base and are insightful in their implications for further study.

For written products A and B: The quality of content, organization, and coherence of the writing is close to the level expected of professional publication.

Oral presentation:
The presentation is of the quality that is expected at a regional or national professional conference. The presentation should include a discussion of the integrative paper (part B).

Criteria for Successful Completion
In order to successfully complete the project, the student’s advisory committee must unanimously decide that the student has satisfactorily addressed all of the elements in Parts A, B and C. Each member of the student’s advisory committee is required to evaluate the student’s project as part of Program’s Evaluation of Student Learning Outcomes (see the Appendix for scoring rubrics). The completed evaluations are submitted to the program Director. Students are expected to achieve a score of acceptable or better in each of the domains evaluated.

Re-examination
Qualifying projects may be resubmitted once if the student fails the first submission. A student may petition a re-submission to the Program Director. The student may resubmit the project no sooner than the beginning of the semester following the one in which the failure occurred, and must resubmit the project no later than three semesters after the first submission of the project. A second failure of the examination results in recommending the student’s termination from the program to the Graduate School. Note. Students in the clinical concentration/program are also expected to successfully pass a comprehensive clinical examination (see p. 59).

Practicum
Students are required to complete a practicum placement during their training in the Program. Ideally, this practicum experience provides the students with the opportunity to gain experience working with a multidisciplinary team in a research, clinical, or community setting outside of the Program. Specific guidelines for the practicum experience for each concentration/program are provided in subsequent sections.

Conduct on practicum
Health Psychology students are expected to behave in a legal and ethical manner during all aspects of their practicum training. Students are expected to adhere to the
ethical and professional guidelines established by UNC Charlotte and the American Psychological Association (http://www.apa.org/ethics/code/). Examples of potentially illegal, unethical, or inappropriate behaviors on practicum include the following:

- Failure to meet practicum responsibilities.
- Withdrawing from a practicum site without permission from the Program Director or supervising faculty.
- Violating ethical standards for research and/or practice.
- Insufficient and/or harmful application of psychological theory or practice.
- Significant deficiencies in professional judgment.

The consequences of such behavior may range from a disciplinary letter from the Program to a recommendation to the Graduate School for termination. See section titled “Policy on student unable to meet minimal professional competency standards”.

**Dissertation**

The doctoral dissertation is meant to be a scholarly document reporting on an empirical contribution to the knowledge base in health psychology, broadly defined. For the dissertation, students are expected to:

a) Play a significant role in the development of an important question or set of questions in their selected area of research.

b) Be actively involved in the process of designing a study, collecting data, and/or developing measurement/analytic procedures to address the question(s) of interest. Under most circumstances, data collection will be designed specifically for the dissertation project.

The use of pre-existing data from large scale or longitudinal studies may be appropriate in some cases. Specifically, this option is acceptable for students who have been involved in all stages of one or more research projects from start to finish, including formulating the research questions and original data collection, at some point in their graduate training.

When students use data from a pre-existing data set, they are still expected to play an independent role in formulating novel research questions and in designing or facilitating new measurement or analytic procedures appropriate to the topic (e.g., the project must involve more than a simple data analysis involving existing variables).

Whether or not their dissertation grows out of existing data, dissertation candidates must demonstrate doctoral level competency in writing, conceptualizing well-targeted research questions, planning and conducting appropriate analyses, and communicating the potential meaning, contribution(s) and implications of their findings.

Acceptable models for the final dissertation are:

2. A document that presents multiple (at least 2) publication length manuscripts (25-35 pages) that represent a coherent program of research, with an integrative Introduction and Discussion. It is acceptable for some of these manuscripts to have been submitted or accepted for publication prior to the dissertation defense.

An example of option 2 could include the following chapters:

- **Chapter 1** Introduction, literature review, specific aims
- **Chapter 2** Overall methods of entire dissertation
- **Chapter 3** Manuscript 1. This manuscript should be submission ready and would include an Introduction, Aims/hypotheses, Methods, Results, Discussion, References, and Tables/Figures, etc.
- **Chapter 4** Manuscript 2. This manuscript should be submission ready and would include an Introduction, Aims/hypotheses, Methods, Results, Discussion, References, and Tables/Figures, etc.
- **Chapter 5** Discussion. This would be relatively short and should include integration of the findings of the manuscript studies, limitations, and future directions.

References

Appendices

All dissertations need to be formatted according to the UNC Charlotte Graduate School guidelines for Thesis and Dissertations.

**Guidelines for Dissertation Defenses**

Prior to moving forward with the dissertation project, students should complete the forms required by the Graduate School (see [http://graduateschool.uncc.edu/current-students/forms](http://graduateschool.uncc.edu/current-students/forms)). In addition, the Graduate School has provided the following guidelines for dissertation defenses:

1. *Timeline for submitting dissertation document to faculty*: Students should provide their dissertation committee with a copy of their dissertation **3 weeks prior** to the date of the defense.

2. *Doctoral dissertation defense announcement*: The Graduate School’s policy requires that dissertation defenses be open to the University Community.
Students are expected to forward a dissertation announcement to the Program Director at least two weeks prior to the date of the defense for dissemination. The announcement should include the following elements:

Student’s Full Name:
Date of Defense:
Location of Defense:
Time of Defense:
Title of Dissertation:
Dissertation Committee Chair:
Abstract (brief):

3. **Time management of dissertation defenses:** Dissertation defenses should provide the candidate with sufficient time to make his/her presentation and provide ample opportunity for all participants in the defense to ask relevant questions. Thus, students are expected to block 2 to 3 hours for the defense. The dissertation defense is considered the final examination on the way to receiving a doctoral degree. It is important that all faculty involved have an ample opportunity to judge the candidate’s knowledge on the topic of the dissertation.

4. **Dissertation formatting review:** All doctoral dissertations must meet the Graduate School formatting requirements identified in the “Manual of Basic Requirements for Theses and Dissertations” which is available on the Graduate School Website. The Graduate School also requires that all doctoral students make an appointment to meet with a dissertation reviewer prior to the final defense so that any formatting problems can be identified.

**Evaluation of the dissertation project**
Each member of the student’s dissertation committee is required to evaluate the student’s project as part of the Program’s Evaluation of Learning Outcomes (see the Appendix for scoring rubrics). The completed evaluations are submitted to the Program Director. Students are expected to achieve a score of acceptable or better in each of the domains evaluated. If members of the student’s committee do not unanimously agree that the student’s demonstrated at least “acceptable” performance in all domains, written revisions and/or a repetition of the oral defense will be required.

**Degree Requirements**
The doctoral degree in Health Psychology is conferred by the University after the student has demonstrated outstanding scholarship in an approved program of study. Candidates must satisfy all University degree requirements in addition to requirements and all standards established by the HPSY Program. Students are required to be enrolled during the semester they wish to graduate. Please consult UNC Charlotte’s Graduate Catalogue for additional detail about guidelines, degree requirements and dissertations (https://catalog.uncc.edu/content.php?catoid=19&navoid=1119).
Time limits for degree completion

In accordance with UNC Charlotte guidelines, all courses listed on the candidacy form cannot be older than 8 years at the time of graduation. Courses that exceed the 8 year limit must be revalidated. Course revalidation involves obtaining a grade of “B” or better on the final exam or project for the course in question. Please note that no more than 25% of the courses on a student’s program of study may be revalidated, and no course older than ten years may be revalidated. Courses that are older than 10 years will need to be retaken. See graduate school guidelines (https://catalog.uncc.edu/content.php?catoid=19&navoid=1119)

IV. COURSE WORK

- Doctoral-level courses are numbered at the 8000 level. Credit hours are provided in parentheses.

- The curriculum has 5 major curricular components:
  - (1) Core Health Psychology
  - (2) Research Methodology & Analytics
  - (3) Area of concentration (program)
  - (4) Interdisciplinary content
  - (5) Electives

- By the end of the fall semester of your 3rd year in the program or prior to the completion of the comprehensive project, your advisory committee will need to approve your program of study (see Appendix). The completed form will be submitted to the Dean of the Graduate School for approval.

1. Core Health Psychology: All areas of concentration (programs) (12 credit hours)

PSYC 8200 Introduction to Health Psychology 1 (3)
PSYC 8201 Introduction to Health Psychology 2 (3)
PSYC 8243 Diversity in Health Psychology (3)
PHIL 8240 Research Ethics in the Biomedical and Behavioral Sciences (3); PSYC 8107 Ethical and Professional Issues in Psychology – clinical concentration only.

2. Research Methodology & Analytics: 24 credit hours general program; 18 credit hours clinical program; and 18 credit hours community program (See below for hour distribution across areas of concentration).

PSYC 8102 Research Methodologies in Behavioral Sciences (3)
PSYC 8103 Basic Quantitative Analyses for Behavioral Sciences (3)
Advanced Research and Methodology (3) – see pre-approved courses below
PSYC 8262 Practicum in Health Psychology - general concentration (3); PSYC 8455 Practicum in Community Psychology (3) – community concentration only

The courses listed below have been approved by the program for all concentration areas. Students who wish to enroll in a course not included in this list should follow the procedures listed in the Appendix for obtaining approval from their Advisory Committee and the Program Director.

PSYC 8104 Advanced Quantitative Analyses for Behavioral Sciences (3)
PSYC 8099 Topics in Psychology: Measurement and Scale Development (cross-listed as HLTH 8281) (3)
PSYC 8145 Applied Research Design and Program Evaluation (cross-listed as PSYC 6145) (3)
PPOL 8000 Topics in Public Policy: Categorical Data Analyses (3) (The content of topics courses may vary, but to meet this requirement it must be a research methods/statistics course).
HLTH 8003/PPOL 8665/HLTH 6260 Analytical Epidemiology (3)
PSYC 6650 Research Methods Seminar in Org Sci (3)
HLTH 8602 Communicating and Disseminating Research
HLTH 8282 Health Survey Methods
PSYC 8999 Dissertation (1-9; 9 total allowed)

3. Area of concentration:

**General concentration (program):**

- **Psychological Science Distribution (9 hours)**
  
  Select three courses from three of the four domains (i.e., at least three of the four domains must be covered)
  
  - Biological/Physiological Domain
    - PSYC 6115 Sensation and Perception (3)
    - PSYC 8113 Physiological Psychology (3)
  
  - Cognitive Domain
    - PSYC 6111 Psychology of Learning and Memory (3)
    - PSYC 6116 Cognition (3)
    - PSYC 6216 Cognitive Science (3)
  
  - Developmental Domain
    - PSYC 8099 Topics in Developmental Psychology (3)
    - PSYC 6124 Psychology of Aging (3)
  
  - Social-Personality Domain
    - PSYC 6130 Social Psychology (3)
    - PSYC 6135 Psychology of Personality (3)

- **Clinical concentration (program):**
  
  - Clinical courses (49 credit hours):
    
    - PSYC 8050 Topics in Psychological Treatment (3)
    - PSYC 8141 Intellectual Assessment (4)
- PSYC 8142  Personality Assessment (4)
- PSYC 8150  Introduction to Psychological Treatment (4)
- PSYC 8151  Behavior Disorders (4)
- PSYC 8240  History and Systems of Psychology (3)
- PSYC 8245  Clinical Supervision and Consultation (3)
- PSYC 8450  Practicum in Clinical Psychology: 1-3 hours per semester for a minimum total of 9 credit hours. For students with prior graduate clinical training a minimum of 6 credit hours need to be completed in residence.
- PSYC 8950  Internship (3) (typically 1 credit per semester, although students may take more credits if needed to meet student loan requirements)

  o Breadth courses (12 credits):
    - Cognitive: PSYC 6116 Cognition (3) or PSYC 8099 Topics in Psychology (Cognition and Motivation).
    - Developmental: PSYC 8099 Topics in Developmental Psychology (3)
    - Physiological: PSYC 6113 Physiological Psychology (3)
    - Social: PSYC 6130 Social Psychology (3)

  ➢ Community concentration (program):
    o Community courses (12 credit hours)
      - PSYC 8145  Applied Research Design & Program Evaluation (3)
      - PSYC 8155  Community Psychology (3)
      - PSYC 8255  Community Interventions (3)
      - PSYC 8555  Community Research Practicum (3)

4. Interdisciplinary Courses: general and community programs (15 credit hours) and clinical (9 credit hours) from among the following:

The courses listed below have been approved by the HPSY Program for all concentration areas. Students who wish to enroll in a course not included in this list should: 1) Meet with his/her advisory committee to obtain their approval for enrolling in that course and 2) Complete an interdisciplinary course request form and submit it to the HPSY Director. Please note that the below courses are not necessarily offered every semester and it is the student’s responsibility to ensure courses fit their schedule.

- GRNT 6600 Current Issues in Gerontology (3)
- GRNT 6210/MPAD 6210 - Aging and Public Policy (3)
- COMM 6000 Topics in Communication Studies (3)
- HLTH 6221 Community Health (3)
- HLTH 6201 Social and Behavioral Foundations of Public Health (3)
- HLTH 6207 Community Health Planning and Evaluation (3)
- NURS 6115 Health Policy and Planning in the United States (3)
• PPOL 8661 Social Organization of Healthcare (3)
• PPOL 8663 Health Policy (3)
• HSRD 8000 Introduction to Health Services Research (3)
• HSRD 8002 Health Care Systems and Delivery (3)
• HSRD 8004/PPOL 8667 Economics of Health and Healthcare (3)
• PSYC 8145 Applied Research Design & Program Evaluation (3)
• PSYC 8155 Community Psychology (3)
• PSYC 8255 Community Interventions (3)
• PSYC 8455 Practicum in Community Psychology (3)
• PSYC 8555 Community Research Practicum (3)
• PSYC 8099/SOCY 6090 Topics in Psychology/Topics in Sociology (3)

5. Electives

• PSYC 6115 Sensation and Perception (3)
• PSYC 6113 Physiological Psychology (3)
• PSYC 6111 Psychology of Learning and Memory (3)
• PSYC 6116 Cognition (3)
• PSYC 6216 Cognitive Science (3)
• PSYC 6124 Psychology of Aging (3)
• PSYC 6130 Social Psychology (3)
• PSYC 6135 Psychology of Personality (3)
• PSYC 8260 Topics in Health Psychology: Mindfulness (3)
• PSYC 8099 Topics in Psychology: Developmental Psychology (3)

General Health Psychology Curriculum & Degree Requirements
Minimum credit hours required for graduation: 78

Coursework

1. Core Health Psychology: (12 credit hours)
   • PSYC 8200 Introduction to Health Psychology I (3)
   • PSYC 8201 Introduction to Health Psychology II (3)
   • PSYC 8243 Diversity in Health Psychology (3)
   • PHIL 8240 Research Ethics in the Biomedical and Behavioral Sciences (3)

2. Research Methodology & Analytics: (24 credit hours)
   • PSYC 8102 Research Methodologies in Behavioral Sciences (3)
   • PSYC 8103 Basic Quantitative Analyses for Behavioral Sciences (3)
   • PSYC 8262 Practicum in Health Psychology (3)
   • Advanced Methodology Course (3) {see pre-approved list on page 31; or seek approval for course}
   • Advanced Methodology Course (3) {see pre-approved list on page 31; or seek approval for course}
   • PSYC 8999 Dissertation (1-9; 9 total allowed)
3. Psychological Science Distribution (9 hours)
Select three courses from three of the four domains (i.e., at least three of the four domains must be covered)
- Biological/Physiological Domain
  - PSYC 6115 Sensation and Perception (3)
  - PSYC 8113 Physiological Psychology (3)
- Cognitive Domain
  - PSYC 6111 Psychology of Learning and Memory (3)
  - PSYC 6116 Cognition (3)
  - PSYC 6216 Cognitive Science (3)
- Developmental Domain
  - PSYC 8099 Topics in Developmental Psychology (3)
  - PSYC 6124 Psychology of Aging (3)
- Social-Personality Domain
  - PSYC 6130 Social Psychology (3)
  - PSYC 6135 Psychology of Personality (3)

4. Interdisciplinary Content (15 credit hours)
- Students should carefully select among interdisciplinary courses (see page 33) in close consultations with their advisors and Advisory Committee.
- Other than those courses on the “pre-approved” list, all courses to be used for this requirement must be approved prior to enrolling in the course by the student’s Advisory Committee (see Appendix for the approval form). Post-hoc approvals are not allowed.

5. General Electives (18 credit hours)
- PSYC 8899 Readings and Research (up to 9 credits allowed)
- PSYC 6999 (if student is co-enrolled in an MA program in Psychology) (up to 6 credits allowed)
- Pre-approved courses (see page 34 for approved courses)
- Additional Methodology courses (see page 31 for approved courses)

Electives or substitutions must be pre-approved by the student’s Advisory Committee and the Health Psychology Director (see the appendix for the approval form). Post-hoc approvals are not allowed.

NOTE: Please see the program website (http://healthpsych.uncc.edu/) for additional information about course offerings (2 year schedule).
# General Program - Recommended Sequence

## First Year Fall Semester
- **PSYC 8102** Research Methodologies in Behavioral Sciences (3)
- **PSYC 8200** Health Psychology I (3)
- **PHIL 8240** Research Ethics in the Biomedical and Behavioral Sciences (3)

## First Year Spring Semester
- **PSYC 8103** Basic Quantitative Analyses for Behavioral Sciences (3)
- **PSYC 8201** Health Psychology II (3)
- GHP Distribution Course or Interdisciplinary Course (3)
- GHP Distribution Course or Interdisciplinary Course (3)

## Second Year Fall Semester
- GHP Distribution Course or Interdisciplinary Course (3)
- Advanced Research or Quantitative Methods Course (3)
- GHP Distribution Course or Interdisciplinary Course (3)
  
  [Propose 2YP]

## Second Year Spring Semester
- **PSYC 8243** Diversity in Health Psychology (3)
- GHP Distribution Course or Interdisciplinary Course (3)
- GHP Distribution Course or Interdisciplinary Course (3)
- General Elective (3)
  
  [Defend 2YP]

## Third Year Fall Semester
- GHP Distribution Course or Interdisciplinary Course (3)
- General Elective (3)
- Advanced Research or Quantitative Methods Course (3)
  
  [Propose Comps]

## Third Year Spring Semester
- GHP Distribution Course or Interdisciplinary Course (3)
- General Elective (3)
- General Elective (3)
- **PSYC 8262** Practicum in Health Psychology (3)*
  
  [Defend Comps]

## Fourth Year Fall Semester
- GHP Distribution Course or Interdisciplinary Course (3)
- General Elective (3)
- **PSYC 8999** Dissertation (3) [propose]

## Fourth Year Spring Semester
- General Elective (3)
- General Elective (3)
- **PSYC 8999** Dissertation (3) [defend]

*Students may complete the practicum during the summer and register the following fall.*
Clinical Concentration Curriculum & Degree Requirements
Minimum credit hours required for graduation: 88

Because changes are currently being made to APA accreditation standards, students are advised that some course requirements are likely to change in the coming years. If you have any questions about this, please feel free to talk with the DCT.

1. Core Health Psychology Courses (12 credit hours)
   - PSYC 8200 Introduction to Health Psychology 1 (3)
   - PSYC 8201 Introduction to Health Psychology 2 (3)
   - PSYC 8243 Diversity in Health Psychology (3)
   - PSYC 8107 Ethical and Professional Issues in Psychology (3) (this course also meets the APA requirement for a clinical ethics course)

2. Research Methodology & Analytics (18 credit hours)
   - PSYC 8102 Research Methodologies in Behavioral Sciences (3)
   - PSYC 8103 Basic Quantitative Analyses for Behavioral Sciences (3)
   - PSYC 8899 Readings and Research (1-4 credits allowed)
   - PSYC 8999 Dissertation (1-9 credits total allowed)
   - Advanced Methodology Course (3) [see pre-approved list on page 31; or seek approval from your advisory committee prior to enrolling in a course]

3. Clinical Concentration (37 credit hours)
   - PSYC 8050 Topics in Psychological Treatment (3)
   - PSYC 8141 Intellectual Assessment (4)
   - PSYC 8142 Personality Assessment (4)
   - PSYC 8150 Introduction to Psychological Treatment (4)
   - PSYC 8151 Behavior Disorders (4)
   - PSYC 8240 History and Systems of Psychology (3)
   - PSYC 8245 Clinical Supervision and Consultation (3)
   - PSYC 8450 Practicum in Clinical Psychology (1-3 hours per semester for a minimum total of 9 credit hours. For students with prior graduate clinical training a minimum of 6 credit hours need to be completed in residence). Second year students should register for the course section taught by Dr. Tedeschi, while students in their third year and above should register for the course section taught by Dr. Webb or Dr. Peterman.
   - PSYC 8950 Internship (1-3) (typically 1 credit per semester, although students may take more credits if needed to meet student loan requirements).

6. Breadth Course Requirements (12 credit hours)

APA requires breadth of education across the broader disciplines of scientific psychology for students in the Clinical program. Clinical students are required to complete graduate level courses in each of the following areas:
Cognitive: PSYC 6116 Cognition (3) or PSYC 8099 Topics in Psychology (Cognition and Motivation)
Developmental: PSYC 8099 Topics in Psychology: Developmental Psychology (3)
Physiological: PSYC 8113 Physiological Psychology (3)
Social: PSYC 6130 Social Psychology (3)

These courses will be offered on a regular basis (usually every other year or so) and the program seeks to schedule at least one of these breadth courses per semester.

Students who entered the program in Fall 2016 or later will be required to complete a new course that integrates cognitive and affective psychology, in order to meet a new APA accreditation requirement. This course will be offered for the first time in Fall 2018.

5. Interdisciplinary Content (9 credit hours): See page 33 for list of approved courses. Students who wish to enroll in a course not included in this list should follow the procedures listed in the Appendix for obtaining approval from their Advisory Committee and the Program Director. Post-hoc approvals are not allowed.

Please see the program website (http://healthpsych.uncc.edu/) for additional information about course offerings (tentative 2 year schedule).

**CLINICAL CONCENTRATION—RECOMMENDED SEQUENCE OF CORE COURSES**

The first year of the above sequence of study is required for adequate preparation for practicum. After the first year of training, the sequence is recommended. Students should discuss their course sequence with their advisory committees on a regular basis.

### Community Concentration Curriculum & Degree Requirements

**Minimum credit hours required for graduation: Minimum of 78 credit hours.**

1. **Core Health Psychology Courses (12 credit hours)**
   - PSYC 8200 Introduction to Health Psychology 1 (3)
   - PSYC 8201 Introduction to Health Psychology 2 (3)
   - PSYC 8243 Diversity in Health Psychology (3)
   - PHIL 8240 Research Ethics in the Biomedical and Behavioral Sciences (3)

2. **Research Methodology & Analytics (18 credit hours)**
   - PSYC 8102 Research Methodologies in Behavioral Sciences (3)
   - PSYC 8103 Basic Quantitative Analyses for Behavioral Sciences (3)
   - PSYC 8455 Practicum in Community Psychology (3)
   - Advanced Methodology Course (3) *(see pre-approved list; or seek approval for course)*
   - PSYC 8999 Dissertation (1-9; 9 total allowed)

3. **Community concentration (12 credit hours)**
   - PSYC 8145 Applied Research Design & Program Evaluation (3)
4. Interdisciplinary Content (15 credit hours)
Students should carefully select among interdisciplinary courses (see page 33) in close consultations with their advisors and Advisory Committee. Other than those courses on the “pre-approved” list, all courses to be used for this requirement must be approved prior to enrolling in the course by the student’s Advisory Committee (see Appendix for the approval form). Post-hoc approvals are not allowed.

5. Electives (21 credit hours)

- PSYC 6999 (if student is co-enrolled in an MA program in Psychology) (up to 6 credits allowed)
- Pre-approved courses (see page 34 for approved courses)
- Additional Methodology courses (see page 31 for approved courses)

Electives or substitutions must be pre-approved by the student’s Advisory Committee and the Health Psychology Director (see the Appendix for approval form). Post-hoc approvals are not allowed.

Minimum credit hours required for graduation: 78

Please see the program website (http://healthpsych.uncc.edu/) for additional information about course offerings (tentative 2 year schedule).

6. Graduate Teaching of Psychology

The Graduate School offers the course *Teaching at the College or University Level* (GRAD 8011) for students interested in teaching. This course will prepare students to teach a lower level (1000 or 2000 level) undergraduate course as the instructor of record under the supervision of a Health Psychology faculty member. Students are eligible for independent teaching if: 1) they have successfully completed GRAD 8011-001; 2) demonstrated excellence as a teaching assistant; 3) **have successfully completed their comprehensive project**; 4) are in good standing in the program (i.e., not on probation). Applications for teaching experiences for the academic year including the following summer can be obtained by submitting the completed *Request for Independent Teaching Form* (see Appendix) to the Director of the Health Psychology Program at the beginning of the fall semester of the year teaching experiences are sought. **Students are required to be enrolled in the Teaching Practicum course (PSYC 8223) during the semester of their first solo teaching assignment.** Students will be evaluated for effectiveness during their independent teaching experience. Student assignment to independent teaching will be based on course availability and interest match. Please note that the availability of undergraduate courses for independent teaching by Ph.D. students is limited. Priority will be given to those students who have not previously conducted independent teaching.

**Guidelines for teaching credit**

**Online courses**

Teaching an online course is equivalent to 10 hours per week as these courses have already been set up by full-time faculty members, so there will be minimal preparation time to make them your own. The main responsibility of the instructor is to answer student questions and grading assignments. The expected class size for these sections will be 30-35 students. To fill a 20-hour assistantship, you may teach two sections of this size, or one larger section of around 70 students. Available courses in this category include:

- PSYC 1201 Careers in Psychology (new catalog course as of Spring 2017)
- PSYC 2101 Research Methods 1
- PSYC 2113 Brain and Behavior

**Traditional lecture/discussion format**

For the first time teaching this course, the effort is equivalent to 20 hours per week. For each subsequent time you teach this course, each section will be equivalent to 10 hours per week. The expected class size for these sections will be 30-35 students. Once an instructor has prepped a class previously, they may request to teach two sections of 30-35 students or one larger section of about 70 students to fill a 20-hour teaching assistantship. Available courses in this category include:
• PSYC 2120 Child Psychology  
• PSYC 2121 Adolescent Psychology  
• PSYC 2124 Adulthood and Aging  
• PSYC 2126 Psychology of Women  
• PSYC 2130 Social Psychology  
• PSYC 2150 Adjustment  
• PSYC 2151 Abnormal Psychology  
• PSYC 2160 Health Psychology

Solo teaching, PSYC 2103 Research Methods 2  
This course is writing intensive and involves significant grading responsibilities each time it is taught, as such it counts as 20 hours per week. Pre-developed online sections are available. Expected class sizes will be kept to 15 students the first time an instructor teaches the course, and will move to 20-25 students for subsequent course offerings.

V. PROCEDURES

1. Transfer of Credit

Students may transfer up to 30 credit hours from previous graduate level work, only if these courses are appropriate for the Health Psychology Program and meet the guidelines established by the Graduate School (see http://catalog.uncc.edu/content.php?catoid=8&navoid=456#Ph.D._Degree_Requirements). The steps below need to be followed to seek credit transfer:

- Develop a list of courses that you believe should count as transfer credit and cross-list against the equivalent courses offered by the Program. Obtain a copy of the syllabus of each course you wish to transfer.

- Submit a copy of the syllabi to your primary advisor. If your advisor approves those courses, a copy of the syllabi should be reviewed by your advisory committee. If they agree that the transfer course is substantially equivalent to our program course, your committee will recommend to the Program Director that the transfer(s) be accepted.

- The Program Director will review the request and if s/he approves it then the student will submit a formal academic petition to the Graduate School to finalize this process (http://graduateschool.uncc.edu/current-students/forms#Special Request).

- For clinical courses submit the syllabi from clinical coursework to the DCT, who will follow the procedures outlined below.

- Your primary advisor and members of your advisory committee will review that list and the syllabus for each of the non-clinical courses. Your primary advisor will
make a recommendation to the Program Director to accept or not accept those courses.

- The Director of Clinical Training will contact the clinical faculty member who teaches the clinical course for which credit is requested and will ask her/him to review the syllabus submitted by the student. If the course instructor and the DCT agree that the transfer course is substantially equivalent to our program course, the DCT will recommend to the Program Director that the transfer(s) be accepted. IN MOST CASES, STUDENTS WILL NOT BE ALLOWED TO TRANSFER CLINICAL COURSES FROM OTHER INSTITUTIONS.

- The Program Director will review these recommendations and approve or disapprove. If the Director approves the transfer, the student will need to complete a special request via the Graduate School.
- Completion of the Graduate School Application for Transfer of Credit Form (See Graduate School Forms [http://graduateschool.uncc.edu/current-students/forms#Special Request]).

The Dean of the Graduate School will either accept or reject the Director's recommendation. Students are encouraged to monitor their transcript regularly to determine if the transcript request was approved as the Program will not be formally informed of these decisions.

2. Annual Evaluation

Students in the Health Psychology Program are evaluated yearly in areas such as progress in meeting programmatic milestones, coursework, scholarship and research activities, as well as clinical training and teaching (if applicable). This evaluation is conducted by the Program Director and the core faculty in your specific concentration/program. The evaluation is based on the Self-Report of Professional Accomplishments (see the Appendix) that is submitted to the Director, as well as relevant information from faculty with whom you have worked and/or had as instructors. First year students are evaluated twice during their first year of graduate studies, at the end of the fall and spring semesters. Following the first year of study, students are evaluated annually at the end of the spring semester. Students on programmatic probation or with other difficulties are evaluated every semester.

3. Programmatic Probation

Based on Graduate School guidelines, students will be placed on programmatic probation under any of the following conditions:

- The student fails to complete a programmatic milestone by the end of the semester following a required timeline for completion.
- The student fails to meet the minimum grade requirements for the program.
Once on probation, the student must complete the milestone in question or raise her/his grade point average by the end of the following semester. Failure to successfully meet programmatic expectations during the probationary period may lead to termination from the Program. Further, students on programmatic probation will have the lowest priority for graduate assistantships and will not be able to teach independently at the undergraduate level.

Students may appeal in writing their probationary status to the Program Director. The written appeal should provide an explanation of the circumstances that led to failure to meet programmatic milestones or grade requirements and a plan for meeting the requirements during the following semester. Following receipt of the written appeal, the Director will conduct a face-to-face meeting with the student within 30 days of receiving the written appeal to clarify details specified in the appeal. Students will be notified of any actions on their appeal within 30 days following the face-to-face meeting.

If students do not make reasonable efforts to resolve issues that lead to programmatic probation, the Director will appoint a Faculty Board to issue a recommendation regarding termination from the program. The faculty board will conduct:

- A review of the student’s progress in the Program.
- A review of the actions taken by the Program to assist the student in the process of meeting programmatic milestones, grade requirements, and professional competency standards.
- Conduct a hearing with the student to discuss his or her efforts to meet programmatic requirements, progress made at the end of the probationary status, and any circumstances that may have prevented the student from meeting these requirements.

The faculty board will make a written recommendation to the Program Director with regard to the student’s termination based upon the results of the process outlined above.

4. Programmatic Termination

**Failure to meet programmatic milestones.** Students who have not been able to meet programmatic milestones may be terminated from the program. The Program Director will make a recommendation to the Dean of the Graduate School regarding a student’s termination from the Program after consulting with the Faculty Board appointed to review the students’ academic performance in the program. Students have the right to appeal this decision to the Graduate School (see **Student Grievance Procedure**).

**Academic Suspension.** The accumulation of three marginal C grades in any graduate course will result in the suspension of enrollment by the Graduate School. Any student receiving a grade of U in any course will be terminated. Students who have been
suspended or terminated are ineligible to register in any semester or summer session until they have been properly reinstated (see Graduate Catalog).

5. Student Grievance Procedure

The Health Psychology Program recognizes that in the course of students’ involvement with the Program, issues or concerns regarding their relationship with program faculty or other program-related activities may emerge. Students are encouraged to attempt to resolve these issues/concerns informally with the faculty member or to seek assistance from their primary advisor, the Director of the Program or the Director of Clinical Training (DCT). In some cases, issues may most appropriately be addressed by organizations such as the Health Psychology Program Advisory Committee or the Health Psychology Graduate Student Association (HPGSA). However, there may be instances in which, due to the nature of the concern, a student does not feel comfortable or cannot raise an issue via these routes. To ensure that Health Psychology students have an outlet for such concerns, the students will elect 2 program liaisons (1 faculty member from within the Health Psychology Program and 1 from outside the Program). These ombudspersons will serve for a period of one academic year (August – May) with the possibility of renewing the appointment. Dr. Theresa Rhodes will be serving as ombudsperson during the 2016-2017 academic year.

Procedures for electing the Ombudspersons:

- Students in the Program will nominate candidates once they have confirmed with the candidate that he/she is willing to serve in this capacity.
- Students will submit nominations for a Health Psychology ombudsperson and a non-Health Psych ombudsperson. This nomination period will coincide with nominations that occur at the end of the spring semester for HPGSA and program representatives to the Health Psychology Advisory Committee.
- The President of the HPGSA will privately approach the faculty members who received the most nominations to offer the ombudsperson positions.
- If either faculty member declines the position, the President of the HPGSA will privately approach the faculty member who received the next highest number of student nominations until both ombudsperson positions are filled.
- The Director of the Program and the Director of Clinical Training may not serve in this capacity.

The role of the Ombudspersons:

- The Ombudspersons will be responsible for providing consultation/advice to students regarding: 1) issues related to interactions with primary advisors or advisory committees; 2) issues involving Health Psychology faculty and faculty in other departments; 3) issues/concerns related to program or departmental staff; 4) issues/concerns related to Program requirements (e.g., practicum placement, supervisors, etc.); and 5) other Program- or university-related concerns.
In some cases (e.g., issues of professional ethics; classroom content or structure; inquiries or issues regarding practicum placements or supervisors), the issue may be best addressed within the context of existing Program structures; at such times, the ombudsperson’s primary role is to work with students toward identifying the best course of action and guiding them in the process of achieving resolution.

It is expected that discussions between ombudspersons and students will remain confidential unless what is discussed is in direct violation of university policy, necessitating a breach of confidentiality.

The procedures outlined above do not replace the procedures set by the Graduate School regarding issues related to student difficulties including grade appeals, academic integrity violations, sexual harassment, disability, and discrimination; rather, they are intended to serve as an additional mechanism for resolving student-related concerns.

If a student decides not to seek assistance from the ombudsperson(s) to resolve the differences or grievances, or if the student is not satisfied with the response, he or she may present the grievance in writing to the Program Director. According to the guidelines established by UNC Charlotte, any such written grievance must be received by the Director no later than forty-five calendar days after the student first became aware of the facts which gave rise to the grievance. If the grievance is against the Program Director, the student should address his or her grievance to the Dean of the Graduate School or appropriate Assistant Dean. The Director should conduct an informal investigation as warranted to resolve any factual disputes. Upon the student’s request, the Director shall appoint an impartial fact-finding panel of no more than three persons to conduct an investigation. The Director must state the terms and conditions of the investigation in a memorandum appointing the fact-finding panel. A fact-finding panel appointed hereunder shall have no authority to make recommendations or impose final action. The panel’s conclusions shall be limited to determining and presenting facts to the Director in a written report.

Based upon the report of the fact-finding panel if any, the Director shall make a determination and submit his or her decision in writing to the student and to the person alleged to have caused the grievance within ten calendar days of receipt of the panel’s report. The written determination shall include the reasons for the decision, shall indicate the remedial action to be taken if any, and shall inform the student of the right to seek review by the Dean of the Graduate School.

Students may appeal the recommendation issued by the Program Director to the Dean of the Graduate School. Additional information about the University’s grievance procedures can be found in the Graduate Catalogue (http://graduateschool.uncc.edu/images/stories/catalogs/GraduateCatalog1011.pdf.)
6. Sexual Harassment Policy

The HPSY Program adheres to the University’s policy regarding sexual harassment involving students, faculty, or any employee of the university. Details about UNCCs policy related can be found in the Graduate Catalog https://catalog.uncc.edu/content.php?catoid=19&navoid=1117

7. Professional Conduct

The HPSY program adheres to the code of conduct established by the University of North Carolina at Charlotte and the Graduate School with respect to scholastic integrity, cheating, fabrication and falsification, multiple submissions, plagiarism, abuse of academic materials, and complicity in academic dishonesty (see Graduate Catalog https://catalog.uncc.edu/content.php?catoid=19&navoid=1117). In addition, students are expected to adhere to the ethical and professional standards established by the American Psychological Association. HPSY students are expected to be familiar with this code. For detail please visit the following sites:

https://catalog.uncc.edu/content.php?catoid=19&navoid=1117

VII. INFORMATION ABOUT SPECIFIC CONCENTRATION AREAS

GENERAL CONCENTRATION (PROGRAM)

Section 1: Pedagogical Goals

Consistent with the expected competencies of a Health Psychologist, our curriculum is designed to develop strengths in a number of areas, including:

1.1. Knowledge of psychological science: Students are trained in all of the basic areas of psychology, including biological bases of behavior, social psychology, developmental psychology, personality processes, and learning.

1.2. Knowledge of health psychology: Students are expected to develop expertise in the field of health psychology and should develop a professional identity as health psychologists.

1.3. Knowledge of core research methodologies: Consistent with modern research, students are expected to develop expertise across the core research methodologies and modern data analytic techniques. In addition to the thesis and dissertation, students are expected to demonstrate these competencies via collaborations with faculty on research projects throughout their training, and the results of these research projects are to be published in journals and presented at regional, national, or international conferences.

1.4. Theoretical and conceptual skills: Health psychology, as a science, progresses through both research and theory. In addition to the mechanics of
design and analysis, students are expected to develop the ability to conceptualize a problem and develop testable hypotheses regarding health.

Section 2: Practicum Experience

The practicum experience for the General Health Psychology Program is considered an integral part of the student’s doctoral education. The primary objective of the practicum experience is the development of additional research and/or professional skills and competencies that will benefit the student’s emerging career path. The practicum experience should be tailored to the student’s interests, developmental needs, and career goals.

A suitable practicum experience will be identified by the student and his/her advisor, and is typically completed during the third year of residency after completion of the second year project or masters thesis (though it can be done earlier if appropriate). To be an eligible practicum experience, the proposed experience must be (a) an offsite (outside of the Psychology Department; preferably off campus) research or applied project designed to help the student gain practical experience and skills and (b) require at least 9 hours/week for 10 weeks in practicum-related activity, and (c) have a practicum supervisor on location other than the student’s regular advisor.

Practicum experiences must be authorized in advance of starting the experience. The HPSY program will NOT authorize practicum experiences post hoc.

Upon completion of the practicum, a Practicum Evaluation form must be completed by the on-site practicum supervisor and returned to the GHP coordinator. As students near the end of their practicum experience, they should contact the GHP coordinator and ask that the evaluation form be sent to the on-site supervisor. It is the student’s responsibility to request this form be sent to the supervisor. The supervisor will then return the evaluation form the GHP coordinator, who will then provide copies to the student and his/her academic advisor. A practicum experience will not be considered completed until this form is on file.

Students must register for at least 3 credits of practicum experience (PSYC 8262). If a student is completing the practicum experience during the summer, they may choose to delay their registration until the subsequent Fall semester.

CLINICAL CONCENTRATION (PROGRAM)

Consistent with our identification as a Scientist-Practitioner program, clinical students are expected to develop expertise in both research and clinical practice. This section provides more detail about our clinical training.

1. Clinical Training and Clinical Practicum Information
Clinical training is a core element of the Clinical concentration/program of the Health Psychology Program and, ideally, is integrated with students’ research and academic experiences. The Director of Clinical Training (DCT: currently Dr. Amy Peterman) is responsible for coordinating, monitoring, and evaluating these experiences. The student should work with the DCT, as well as their primary advisor, to tailor clinical experiences that work best for their career interests and goals.

Clinical Practicum

Background: A practicum is a formal, supervised experience in clinical psychology for which one earns academic credit. Practica usually last for 9 to 12 months and consist of, at minimum, an average of 10 hours per week, but no more than an average of 20 hours per week. There is some flexibility in hours, particularly during the summer and for summer-only practica. Practicum hours include provision of direct clinical services, as well as clinically related activities such as supervision, record keeping, etc.

Students generally begin practicum in their second year of residence in the program. During their first year, they are expected to take courses that will prepare them for practicum including the following: Intellectual Assessment, Personality Assessment, Behavior Disorders, Ethical and Professional Issues in Psychology, and Introduction to Psychological Treatment. It is also expected that the health psychology course sequence (Health Psychology 1 and 2) will provide important background information prior to practicum.

Practicum Readiness: Students are ready for practicum if they meet the following criteria: are in good standing in the program (i.e., not on probation), have successfully completed the above courses in the first year, and are approved by the DCT based on his/her consultation with their primary advisor and other Health Psychology faculty. Each spring, practicum site supervisors come to UNC Charlotte to present information about their site and training opportunities (see below). Interested students interview at the site(s); each site subsequently selects students to begin their practicum in the summer or fall. The DCT coordinates this process and guides students to appropriate sites. For instance, some sites are more suited for those with previous clinical experience and have conveyed a desire for more advanced students, whereas other sites are willing to take students without previous clinical experience. Students generally get their first or second choice of practicum site.

Practicum Course Enrollment: During practicum, the student must continually register for between one and three academic credit hours of Practicum in Clinical Psychology (PSYC 8450). Students in their first practicum attend the accompanying class by Dr. Tedeschi, which is numbered 8450-001. This class is an introduction to the practice of clinical psychology and covers a wide-range of general clinical issues. Because this class has been designed to follow Dr. Tedeschi’s Introduction to Psychology Treatment course, there is a focus on clinical practice and supervision vs. didactics. In their second practicum, students register for PSYC 8450-002, but instead take the course from Dr. Webb during the Fall term and Dr. Peterman during the Spring term. The focus of this
course is clinical health psychology, though a range of other general topics are also covered. This class includes a didactic piece, as well as a clinical practice/supervision component. During the summer, students must still enroll in PSYC 8450 if they are seeing clients at a practicum site. The instructor varies during the summer. If students take a third or fourth practicum, they again register for PSYC 8450 but they do not attend the regular meetings of this course. Students may meet with Drs. Webb or Peterman for individual supervision and may be required to complete assignments that are relevant to their current practicum.

Most practicum sites, other than the Student Counseling Center, require a full year (12 month) commitment from students: that is, external practicum sites do NOT operate on an academic schedule and they provide clinical services year round. This means that students will be required to register for at least one practicum credit during the summer session and must organize their schedules to be available for practicum during this time.

In all practicum courses, students are assigned grades ranging from A to U (Unsatisfactory). Because the final evaluation from site supervisors may come after the semester, a grade of IP (In Progress) is given until all the evaluations are completed. The final letter grade is assigned by the DCT in consultation with the site supervisor and the UNC Charlotte faculty member teaching Practicum in Clinical Psychology (i.e., Drs. Tedeschi, Webb, or Peterman). For the most part, the DCT assigns the grade the instructor of the course recommends, but reserves the right to assign a different grade based on information from the practicum site.

Students who are engaged in clinical work as part of a paying job or grant should inform the DCT about the nature and extent of their clinical work. He or she will determine academic and supervision requirements on a case-by-case basis.

**Number of Practica Needed:** Students entering without a master’s degree in clinical psychology will take at least two clinical practica while in residence: most will complete three or four practica in order to obtain the experience necessary for internship. The first clinical experience is housed in the Student Counseling Center on campus. Please see below for a description of other possible practicum sites.

Ideally, these will reflect a mix of experiences, but at least one will focus on health/behavioral medicine issues and will be housed in a medical or healthcare facility. Across these two experiences, students should seek to earn a minimum of 1,000 hours (500 direct) of clinical experience if possible. There will be, of course, variability in hours accrued based on placement, workload, clinical interests, etc. Students entering with a master’s degree in clinical psychology (with requisite clinical experiences) will generally complete one or two practica while in residence. The number of practica will depend on their previous training and experiences. Overall, students should consult with the DCT and their academic advisor to plan their clinical training and to ensure that they are getting the training experiences that they need and/or desire.
A student who completed practicum training within a regionally accredited university can apply for advanced placement in clinical training, which would mean that s/he would not be required to complete the “Beginning Practicum” experience at the Student Counseling Center. To do so, the student will submit a written description of the site(s) at which the practicum/a occurred, the type (e.g., group, individual) and number of weekly supervision hours, and the clinical population seen. Supervisor evaluations of the student’s clinical work will also be submitted. The DCT, in consultation with other clinical faculty, will review these materials to evaluate the comparability of the prior practicum to the initial training provided in our program. If the experiences are substantially comparable and the student received at least a “satisfactory” rating from previous supervisors, the DCT will then determine that the student can receive advanced placement. This qualifies the student to apply for an advanced practicum during the annual practicum assignments cycle in the following spring.

Requirements for Practicum Supervisors: For each practicum, the primary supervisor must be a licensed psychologist. He or she will be responsible for evaluating the student and will be the main contact between the site and the DCT. Other professionals (e.g., physicians, nurses, licensed professional counselors, etc.) may, however, provide additional supervision or training opportunities. The main supervisor is expected to be on site during the provision of clinical services, but if they are not available, another supervisor should be on site and immediately available.

Requirements for Practicum: Prior to starting each practicum, each student must purchase professional liability or malpractice insurance, which is available at low cost from the American Psychological Association Insurance Trust (www.apait.org/apait). The DCT will need proof of this before the student begins the practicum. For each practicum, students sign a letter of agreement between the site and UNC Charlotte (represented by the DCT). In each practicum, students are evaluated by the practicum supervisor twice, at the half-way point and at the end of the experience (see the Appendix). At the conclusion of the practicum, the student must evaluate the site and the site supervisor (see the Appendix). This form is returned to the DCT and, after several students have progressed through the site, this information is collated and sent to the site. Students cannot be individually identified.

While on practicum, students are responsible for tracking their clinical hours using the Excel form provided by the DCT or the MyPsychTrack program (see the Appendix). Failure to do this may result in delays in applying for internship, incomplete grades, or other academic or clinical difficulties. If the student experiences difficulties or conflicts on site, the student should first seek to address these with the site supervisor, per American Psychological Association guidelines. If this is not successful or the student does not feel comfortable doing this, they should address these issues with the instructor of the practicum course and/or the DCT.

Comprehensive Clinical Examination

Judging a student’s clinical and professional readiness for internship is a key issue for doctoral programs in clinical psychology. At UNC Charlotte, we achieve this in several
ways including performance in clinical courses, practicum ratings from supervisors, and completion of the Clinical Comprehensive Examination. This examination is in the form of a written paper and a clinical case conference. The ability to communicate about clients in both written and oral forms are important aspects of the professional development of clinical health psychologists. Such presentations serve to provide the student an opportunity to integrate academic and clinical work and to sharpen their conceptualization of cases and communication skills. Moreover, the case presentation provides the faculty with a concise and standardized format to evaluate students' clinical competencies, while also evaluating some indicator of competency (i.e., video or audio tape). To these ends, the clinical faculty requires that all clinical students give a formal case presentation during the second semester of Clinical Psychology Practicum (PSYC 8450). Successful completion of this case presentation is one of the requirements for applying for internship. The case presentation will be on a current or past client and will consist of a written paper and an oral presentation. Details about the timing, format, evaluation process, etc. are provided below.

*Predoctoral Internship*

Predoctoral internship is a full-year clinical experience that can be completed at a variety of sites throughout the US and Canada. It is required that students complete either an APA-approved internship, which are typically the best training sites, or Association of Psychology Postdoctoral and Internship Centers (APPIC) member internships. Unfortunately, there are only 2 APA-approved internship sites in the Charlotte area (UNC Charlotte Counseling Center, and Salisbury VA Medical Center); there is also an APPIC member internship at Southeast Psych that has two slots. Because of the scarcity of local sites, it is likely that one must be flexible and willing to move to a different location for internship. Students who wish to apply for internship must meet the following criteria: be in good standing in the program (e.g., not on probation), complete all relevant clinical coursework, successfully complete the Comprehensive Clinical Examination, be approved by the DCT in consultation with HPSY clinical faculty, and propose their dissertation by October 15th of the year prior to internship. While on internship students must be continually registered for Internship during the Fall and Spring semesters (PSYC 8950). Summer internship registration is not required by the HPSY program provided that there is a formal internship contract between the internship site and the program. However, each student is responsible for checking with the DCT at their internship site to be certain that the internship does not require summer registration. Students may register for one to three internship credits per semester. However, each student should check with their student loan provider (if applicable) to determine the minimum number of credit hours required for registration in order to avoid initiation of loan payback.

Submission of information to the various internship sites is generally due in November or December with the internship beginning either the next summer or fall. All application materials are submitted electronically. Additional information on the internship application process, as well as internship sites, is available at [www.appic.org](http://www.appic.org).
Licensure

Graduates of the clinical concentration/program are license eligible in North Carolina and many other states after completing their pre-doctoral internship and one-year of supervised post-doctoral experience. Some states require provisional licensure during the time that students are accruing post-doctoral supervised clinical hours. Students are strongly encouraged to check the website of the American Society of Professional Psychology Boards (www.asppb.org) or the individual state’s licensing board to determine licensure and practice requirements. It is particularly important that students be aware of regulations related to the timing of degree completion vis-à-vis’ the start of post-doctoral hours and license application. Despite the fact that our program is now APA-accredited, some state licensing boards are still requiring copies of all course syllabi.

Testing library

Please note that the Program maintains a large library of psychological tests that is available for all students. Students may use these tests on practicum or for research. These tests are located in Colvard 4004 and 4126. The DCT maintains a complete list of tests, as well as policies and procedures for their use (see Appendix)

Detailed description of main practicum sites (as of August 2017)

Site: UNC Charlotte Counseling Center

Location: UNC Charlotte

Distance from UNCC: N/A

Main Supervisor: Theresa (Terri) Rhodes, Ph. D.

Contact Information: rhodes@uncc.edu

Other Supervisors: Various counseling center staff

Average hours per week: 20

Paid: No

Description of Experience:

All clinical students who enter the program without clinical experience will have their first practicum at the Student Counseling Center during their second year in the program. This is called the “Beginning Practicum (BP)” and will consist of 6-10 hours/week of didactic instruction provided by the Counseling Center Staff, psychotherapy with 1-3 clients per week, and intensive supervision of this clinical work.
More advanced students may apply to the “Advanced Practicum” experience in the Counseling Center. Typically, only one student from our department will be chosen to be in that role each year. Advanced Practicum students will be expected to participate in a 20 hour per week training experience that will be broken down into the following activities per week: 2-4 intake sessions, 5-10 individual/couples sessions, co-leading a structured group, one hour of group supervision, one hour of individual, face to face supervision, one hour and a half of staff professional development meeting, 2-4 programs/projects per semester in a chosen area of health psychology focus (e.g. stress management, eating disorders, suicide prevention, substance abuse concerns, or relationship violence); and students may have the opportunity to collaborate with Health Education department in Student Health Services in providing programs and outreach services.

Site: Carolina’s Medical Center—Elizabeth Family Practice

Location: 2001 Vail Ave., Charlotte, NC 28207

Distance from UNCC: 9 miles

Main Supervisor: UNCC clinical faculty

Contact Information: UNCC DCT and Josh Diliberto, M.A.

Other Supervisors: Dael Waxman, M. D.

Average hours per week: 16

Paid: No

Description of Experience: The main clinical duties of this health psychology/behavioral medicine practicum at Carolina’s Medical Center-Eastland include the following: Counseling and therapy with adult medical patients in a primary care setting, consultation with medical residents and physicians about psychological issues, and co-leading group therapy for health related concerns such as smoking cessation, weight management, diabetes management, etc. There may also be occasional opportunities for family therapy, brief psychological assessment, inpatient consultation at Carolina’s Medical Center-Main, as well as “shadowing” physicians. The trainee will participate in relevant team meetings, attend didactics such as case conferences and grand rounds, and read assigned materials. The trainee is expected to participate in the behavioral medicine curriculum for medical residents and dental students that cover a range of psychosocial and counseling issues.
**Site:** Wake Forest University Baptist Medical Center Cancer Center  
**Location:** Medical Center Blvd. Winston-Salem, NC 27157  
**Distance from UNCC:** 72 miles  
**Main Supervisors:** Richard McQuellon, Ph. D.  
**Contact Information:** rmcquell@wakehealth.edu  
**Other Supervisors:** None at this time.  
**Average hours per week:** 20  
**Paid:** Stipend varies, but is usually enough to cover gas.

**Description of Experience:** The main elements of this practicum will including the following: Provide supportive counseling to inpatients diagnosed with leukemia and/or family members/significant; provide supportive counseling to patients and/or family members through Solid Tumor Service and Bone Marrow Transplant Service; administer and/or interpret psychological assessment instruments as necessary (primarily depression and anxiety symptom questionnaires, occasional battery for bone marrow transplant patients with Dr. McQuellon); may periodically conduct outpatient therapy sessions as patients become available; may periodically co-facilitate the Caregiver Support Group; and may periodically attend genetic risk assessment and counseling sessions. The trainee will also attend relevant presentations, lectures, and conferences as offered.

**Site:** Wake Forest University Baptist Medical Center, Department of Neurology  
**Location:** Medical Center Blvd. Winston-Salem, NC 27157  
**Distance from UNCC:** 72 miles  
**Main Supervisors:** Tiffany Cummings, Psy.D., Bonnie Sachs, Ph.D. & Leah Chapman, Ph.D.  
**Contact Information:** tcumming@wakehealth.edu  
**Average hours per week:** 16 - 20  
**Paid:** None, but standard mileage reimbursement may be available.
Description of Experience: The main clinical duty of this practicum is neuropsychological assessment of children, adolescents, and adults. These individuals, both in-patients and out-patients, have a wide-range of neurological, psychiatric, and medical diagnoses. There may also be the possibility of participating in brief cognitive rehabilitation and pain management if desired and available.

Site: Integrative Psychotherapy Training Program (IPTP)
Location: Various locations throughout the Carolinas Healthcare System.
Main Supervisors: Clinical faculty (McAnulty, Webb & Peterman). Additional supervision may be provided by other mental health professionals affiliated with the IPTP.
Contact Information: See Dr. Peterman for more information.
Average hours per week: 16 - 20
Paid: No

Description of Experience: The main responsibilities of this experience include consultation, assessment and brief psychotherapy with people receiving medical care at various locations throughout the Carolinas Healthcare System. These may include outpatient primary care and family medicine facilities, inpatient rehabilitation hospitals, and other in- or out-patient facilities. Practicum students address general mental health issues, such as depression and anxiety, as well as clinical health-related problems, such as adjustment to illness, medication adherence and healthy lifestyle changes to facilitate the prevention or treatment of illness (e.g., diabetes).

Site: W.G. Hefner VA Medical Center (Main location in Salisbury and Charlotte-based Outpatient Clinic)
Location: 8601 University East Dr., Charlotte, NC, 28213
1701 Brenner Ave, Salisbury, NC, 28144
Distance from UNCC: 3 miles and 25 miles
Main supervisors: Varies.
Contact information: John.Allmond@va.gov
Average hours/week: 16-20
Description of Experience: Students in this practicum will gain significant experience in group and individual treatment with veterans and their family members. The concerns vary widely, but there is a focus on treatment of post-traumatic stress disorder, depression, anxiety, post-deployment issues, and interpersonal difficulties.

Site: Carolinas Rehabilitation Center, Carolinas Healthcare System

Location: Varies

Distance from UNCC: Varies

Main supervisors: Deborah Cordell, MA, LPC

Contact information: Dr. Amy Peterman

Average hours/week: 16 – 20

Paid: No

Description of Experience:

Carolinas Rehabilitation (CR) serves individuals with a wide variety of medical issues including stroke, traumatic brain injury, and orthopedic injuries. Patients also frequently suffer from cognitive and behavioral problems which require psychological and neuropsychological services. The majority of this practicum will involve the provision of brief assessment and psychotherapy to inpatients at various CR locations. Students will participate in the multidisciplinary team meetings for their patients and may also become involved in research related to the outpatient neuropsychology service at CR.

Comprehensive Clinical Examination

Clinical case presentations are important activities in the professional development of clinical health psychologists. Such presentations serve to provide the student an opportunity to integrate academic and clinical work and to sharpen their conceptualization of cases and communication skills. Moreover, the case presentation provides the faculty with a concise and standardized format to evaluate students' clinical competencies. To these ends, the clinical faculty requires that all clinical students give a formal case presentation when they have completed all clinical courses which will typically be during the second semester of Clinical Psychology Practicum (PSYC 8450). Successful completion of the case presentation is one of the requirements for applying for internship. The case presentation will be on a current or past client and will consist
of a written paper and an oral presentation. Details about the timing, format, evaluation process, etc. are detailed below.

**Selecting a Case**

Students should select a case that has been interesting, challenging, or has facilitated their learning in some way. Students may select a case where something went wrong or where they would have done something different—in other words, the success of their intervention is not necessarily relevant to their performance on the case presentation. What is important, however, is that students are able to reason about difficulties or challenges in a professional and psychologically sophisticated manner. Students may benefit from selecting a case that will provide them with the opportunity to reasonably address all the issues detailed in the section below. Because not all clients are ideal for presentation, students should think about the appropriateness of cases early in practicum. For the case selected, students should provide evidence of how their work demonstrates clinical competency such as a video or audio-tape recordings of an intake or therapy session(s). Students are expected to select a segment or segments that fit with and support their presentation; for instance, they may choose a clip that demonstrates their ability to use a technique or procedure that is consistent with their case conceptualization. Videotape or audiotape is necessary as this allows the best and most efficient method to evaluate clinical competency. Ideally, students will obtain sufficient video or audio evidence to demonstrate competency; this should be made available to evaluators before the oral presentation for their review. During the presentation, only brief select clip(s) should be presented. In addition to video or audio, other supporting indicators of competency such a completed psychological report, chart notes, etc. may also be included. Because this information will be shared with and discussed with faculty during the oral presentation, students are required to obtain the client’s signed permission to release information for educational (non-therapeutic) purposes. Students should work with their site supervisor, as well as the instructor of PSYC 8450, to help them select an appropriate case. Portions of the case may have been previously presented in a class or on practicum.

Please note that if, as a last resort, you are not able to get video or audio-tape, there are other options for demonstrating clinical competencies (e.g., a standardized patient) that can be explored. If this is done, the comps will be adapted on a case-by-case basis.

**Evaluators**

At least two clinical program faculty members will serve as evaluators for each case presentation. If possible, the site supervisor can also be invited to the meeting and may serve as a third evaluator.
Written Paper/Portfolio

The APA-style finished paper should be approximately 25 pages in length, not counting references and appendices. The paper should address each of the domains below, but an emphasis will be on students’ reasoning, case conceptualization, and ability to integrate their clinical work with the relevant research. Students’ ability to use a biopsychosocial model and adopt an interdisciplinary perspective is a key component of a successful case presentation. As might be expected, there will be quite a bit of variability across papers given the differences in student style, practicum training site, supervisor, client selected, etc. The paper is due at least one week before the case presentation. Supporting documentation, including the video/audio tape should also be made available at that time or earlier if it is lengthy. Students should gain approval from the course instructor about the appropriateness of their case before proceeding.

To help structure the paper a suggested outline is presented below. While students may choose to present information in a different sequence and subheadings are not required, students are expected to address each of the following topics. The Clinical Comps evaluation sheet and grading rubric can be found in the Appendix of this Handbook.

1. Demographics (students should conceal the client’s name and other indentifying information so that he or she can not be identified)

2. Presenting complaints and relevant psychosocial history

3. Assessments (e.g., cognitive or personality tests, behavioral observations, etc.).

4. Case formulation, conceptualization, and theoretical considerations

5. Treatment rationale, intervention approach, course of treatment, and outcome

6. Mechanisms of, and obstacles to, change

7. Scientific applications and considerations (e.g., use of empirically supported treatments)

8. Health psychology issues, applications, and considerations

9. Application of the biopsychosocial model

10. Interdisciplinary perspectives and considerations

11. Cultural and diversity issues

12. Ethical issues and considerations
13. Use of supervision throughout the treatment process

14. Take home points and what was learned through this case

15. Appendix of supporting materials (e.g., treatment plan, psychological reports, case notes, etc.). These do not count toward the approximate 25-page length.

**Oral Presentation**

The entire oral presentation should last about 90 minutes and include a brief case presentation followed by a question-and-answer session. Students should provide a brief overview of the case and their therapeutic approach and then be prepared to critically discuss the case with faculty evaluators. The presentation should take approximately 45 minutes, including video or audio-presentation or other demonstration of competency, with the remainder of time devoted to questions. Please note that not all the video or audiotape submitted needs to be presented at this meeting as there would not be enough time-- only select clips are necessary.

A central purpose of the oral presentation is to give students practice “thinking on their feet” and engaging in clinical and scholarly dialogue with peers and faculty. Thus, students should allow time for questions and discussion. It will be important to be able to consider students’ cases from different clinical or theoretical perspectives.

**Evaluation**

The paper and oral presentation will be evaluated on several dimensions, including organization, clarity of rationale and description of the case, use of data to support inferences, integration of theory and scientific data with case description, presentation style, and response to questions.

Each evaluator will provide an assessment of the student’s work. If both evaluators score the case presentation as a below “satisfactory,” this will be considered a failed case presentation. In that case, the student will need to complete another clinical case presentation and possibly work on remedial skills. Failure to do so or continued difficulties on practicum may result in being held back from applying for internship.

Portions of the presentation may have been previously presented in class and/or may have been counted as part of the grade in PSYC 8450. In such cases, students are expected to work with and respond to feedback to improve the case study.

**Presentation**

Whenever possible, oral presentations will be completed on one day at the end of each spring term.
Community Concentration/Program

Practicum Experiences

Students receive applied training and experiences in all courses specific to the Community program. In the core course sequence, which includes Community Psychology, Applied Research and Program Evaluation, and Community Interventions courses, students work with community agencies on applied class projects that are designed to build skills and address needs in the community. The Community Research Practicum and Practicum in Community Psychology involve individual projects with community organizations. In the Community Research Practicum, the focus is on applying research to address community needs and guide interventions, whereas the Practicum in Community Psychology is oriented toward developing community intervention skills or community practice-based competencies, although evaluation of interventions is always part of the process. Thus the distinction between Community Practicum and Community Research Practicum is a matter of relative emphasis on developing research skills versus practice skills.

The specific sites of community practica and other applied community psychology experiences can vary as a function of the various opportunities that exist for students to become involved and develop their skills, and the availability of appropriate on-site supervision. Student interests, professional goals, and plans of study are also of relevance for the selection of the site and project. Most projects involve partnerships with local government entities or nonprofit organizations. The pages that follow include (a) a sample practicum agreement for the student role and scope of work, as well as (b) a description of practicum learning goals for an applied placement.
Example Practicum Agreement

STUDENT’S NAME
Health Psychology Ph. D. Program
The University of North Carolina-Charlotte
9201 University City Blvd
Charlotte, NC 28223-0001
704-687-XXX

NAME AND ADDRESS OF PRIMARY ON-SITE SUPERVISOR
AND ORGANIZATION

Community Health Psychology
Research Practicum: Service Contract and Scope of Work

The Community Research Practicum provides an opportunity for students to apply the principles of community psychology to special areas of need within an organization or community setting. Students can assist agencies and other community stakeholders with technical consultation, evaluation expertise, and, in many cases, direct assistance and/or conduct of a research effort.

[Student Name] will be working with [Organization] for the fall semester, 2009 (from August 24th to December 18th 2009). Her main focus will be assisting their effort to document the need and, if possible, effectiveness of including mental health services in a setting that provides primary care to teens in the Charlotte community. Consistent with the expectations of the practicum course, [Student] will work an average of ten hours per week toward the project (these can be on- or off-site) and will work in conjunction with Drs. [On-site Supervisor], [Faculty Supervisor], and [Faculty Supervisor].

As per discussions with [Organization] staff, [Student] will review chart-level data and prepare a presentation of her findings to be given at [Organization]. She will also prepare a written product, which will be in the form of a literature review, brief report, or research paper.

Example Description Used for Applied Practicum in Community Psychology

Student Name
Spring Semester 2010
This statement was used in discussions with a local non-profit
Experience in Nonprofit Organizations

As a doctoral student in the Health Psychology Program at UNC-Charlotte, we are provided with several field-based practicum opportunities. Most of these involve assisting with program evaluations or conducting community-based research in some capacity. At the same time, as described by the Society for Community Research and Action (SCRA) workgroup on Community Practice, practice-based Community Psychology training should involve skills other than those employed in research and program evaluation, including advocacy, capacity building, collaboration, group processes, and professional development (Scott, 2007). Many of these skills are useful in working with non-profit organizations, an important practice setting for community psychologists. Training in other disciplines concerned with functioning of non-profit organizations (e.g., Dr. XXXXX) is crucial as well, particularly given the interdisciplinary focus of our training program. For this purpose, I am taking several classes for a certificate in Nonprofit Management & Leadership. The certificate program provides a broad knowledge of the nonprofit sector and the major systems that are related to nonprofits, and provides necessary grounding in research in theory from other disciplines to inform practice with nonprofits. Building on this knowledge and my prior training in community psychology scholarship and practice, my professional goal is to practice in a nonprofit setting, more specifically, a setting providing health services to adolescents. However, in order to obtain a rounded training practical experience in nonprofit practice skills beyond those necessary for conducting program evaluation is necessary. Building on my community psychology and interdisciplinary training in nonprofit organizations, and my prior practicum experiences in evaluation and community based research; I propose a practicum experience focusing on these other critical skills for practice in the non-profit sector.

Specific Training Objectives

While several types of practical skills needed for work with nonprofits overlap with my educational experiences in Community Psychology, others do not. After learning about the necessary practical skills for working with nonprofit organizations and examining several job sites seeking employees, I have identified three areas that would benefit my future professional goals. In turn, I seek to obtain experience in:

1) Strategic planning (e.g., formulation of mission, values, goals statements, facilitation of strategic planning meetings)
2) Working with/coordinating volunteers (e.g., volunteer recruitment, selection, supervision)
3) Fundraising (e.g., development of fundraising plans)
Appendix
Graduate School Forms

The forms below are necessary for all graduate students and are available at http://graduateschool.uncc.edu/current-students/forms. Active graduate students should submit all academic requests via the Graduate Academic Petition web-tool.

<table>

Approved by Director of the Health Psychology Program

__________________________________________ Date: _________
(print full name and sign)
Policy Statement
This policy statement sets forth the procedures and guidelines regarding the requirement of a third methodology course in the Health Psychology curriculum beyond the first year sequence of PSYC 8102/8103. All HPSY students are required to take one addition course (General program students must take two additional methodology courses).

Unless a student enrolls in one of the pre-approved courses (see list below), students must petition their Advisory Committee (AC) and the Program Director for a specific course to satisfy this requirement PRIOR to taking the course.

- Under no circumstances will a course be allowed to retro-actively satisfy the requirement. It is the student’s responsibility to obtain approval prior to enrolling in the course. If a student enrolls in a course from the pre-approved list, they do not need to obtain approval.
- The absence of a course from the pre-approved list does not indicate that it cannot count towards the third course requirement. The absence of a course may simply reflect the fact that it was not previously evaluated, or that the course content varies over time.
- Advisory Committees should evaluate a course on the basis of (a) appropriate rigor and level for a doctoral course; (b) that the content goes beyond what was covered in PSYC 8102/8103; and (c) that it is a research methodology course (rather than a content course).
- NOTE: This policy makes no distinction between quantitative and qualitative methods. Either can be used; neither are required. The choice should be based on relevancy to the student’s goals and research area.

Under no circumstances may a course from the Excluded List be approved or used to satisfy the Health Psychology methodology requirement. Advisory Committees may not approve a course from the excluded list.

- Courses on the “Excluded Courses” list will not be allowed to count towards the minimum number of methodology courses required. A student may take these courses and count them towards general electives, but they will not satisfy the “third course” methodology requirement. Courses are on this list typically because they are redundant with PSYC 8102 and PSYC 8103 (which are required courses for Health Psychology students).
- 5000 level courses are not allowed to fulfill the methods requirement.
Approval Procedure

- Students should obtain a copy of the syllabus of the course they wish to use to fulfill the requirement and submit the Approval Form and a copy of the syllabus to their Advisory Committee.
- Upon approval by the AC, the student should forward the Form and the copy of the syllabus to the Program Director for final approval.

Pre-Approved Courses

- PSYC 8104 Advanced Quantitative Analyses for Behavioral Sciences (3)
- PSYC 6207 Psychometrics (3)
- PSYC 8145 Applied Research Design and Program Evaluation. (3)
- PPOL 8000 Categorical Data Analyses (3)
- HLTH 8003/PPOL 8665 Analytical Epidemiology (3)
- OSCI 8650/PSYC 6650 Research Methods Seminar

Excluded Courses (these courses may not be used to satisfy HPSY methods requirements)

- COMM 6100 Communication Research Methods
- GEOG 6131/8131 Research Design Fundamentals
- MPAD 6125 Research Methods for Public Administrators
- MPAD 6126 Data Analysis for Decision Making
- PPOL 8602 Research Design in Public Policy
- PPOL 8620/8621 Quantitative Methods in Public Policy I & II
- PSYC 6205/OSCI 8205 Field and Lab Based Quantitative Research Methods
- SOCY 6653 Advanced Quantitative Analyses (3)
- STAT 6127 Introduction to Biostatistics
Request for Approval of Advanced Research Methods Courses

Complete this form by the end of your **third year in the program**. The completed form should be submitted to the Dean of the Graduate School. Indicate when you completed each course (i.e., Fall 2015) or when you expect to complete the course. For courses that are elective or are not listed in this form please include the course number and title. Also please keep in mind that courses not included in this form will need to be approved by the Program and the Graduate School.

**Date:** ______________

**Name:** _________________________________ **Student ID#** ___________

**Minimum credit hours required for graduation:** 78

**Core courses (12 credits hours):**

- PSYC 8200 Introduction to Health Psychology I (3) ______________________________
- PSYC 8201 Introduction to Health Psychology II (3) ______________________________
- PSYC 8243 Diversity in Health Psychology (3) ______________________________

Program milestones

Describe your progress or anticipated progress on major program milestones depending on your year (e.g., 1st year = assemble committee, 2nd year = propose and complete 2nd year project, 3rd year = complete comps, 4th year = propose dissertation and apply for internship (clinical). Be specific about when you completed each or when you anticipate completing each. If you have not completed the milestone, describe your situation and why you have not completed.

The HPSY Program provides seed funds to support student research. Funds can be requested to purchase equipment, measures, and other materials required to conduct a research project. Any purchase will need to be adhered to UNCC’s purchasing regulations. Equipment purchased with program funds is property of the HPSY Program and UNCC. All equipment should be returned to the HPSY Director upon completion of the study. Requests for participant stipends will be evaluated on a case by case basis. If you are requesting funds for participant payment, you will need to follow UNCC regulations regarding participant stipends. Research funds cannot be used to compensate students, faculty, or staff for their time. All funds should be used during the academic year in which they were approved (no later than May 15th). Please submit the completed form to the Director of the Health Psychology Program.

Student name and ID#: __________________________________________________

Title of the project: _______ ____________________________________________

Description of the study: _________________________________________________

How do you plan to use the requested funds? Please provide a list of the items you will purchase with the requested funds and an estimate of the cost of these items.
Is this study

☐ your second year project?

☐ your comprehensive (comps) project?

☐ your dissertation project?

Have you received IRB approval to conduct this study? YES NO

If not, when do you expect to receive IRB approval? ________________

Month/Date/Year

When do you expect to start this project? ________________

Month/Date/Year

When do you expect to end this project? ________________

Month/Date/Year

Are you in good academic standing (i.e., not on probation)? YES NO

General Health Psychology Practicum Evaluation Form

Student:

Practicum Supervisor: Start Date:

Practicum Site: End Date:

Instructions:
The practicum experience for the General Health Psychology program is considered an integral part of the student’s doctoral education. The primary objective of the practicum experience is the development of additional research and/or professional skills and competencies that will benefit the student’s emerging career path. In order to facilitate that professional growth and development it is important that we obtain information from practicum supervisors regarding the student’s performance. The purpose of this appraisal form is to obtain behaviorally-based ratings of performance to identify areas of strengths and areas in need of further development.

For each performance dimension listed below, please provide a rating using the scale shown, and if possible, provide examples of critical incidents that exemplify the basis for that rating. Again, the purpose of collecting examples of critical incidents is to be able to provide students with behaviorally-based feedback. The more concrete and specific the examples are, the better we will be able to help the student assess their strengths and weakness.

Please consider the following suggestions when evaluating the student’s performance:

1. Avoid the tendency to give highly similar ratings across all dimensions. This typically occurs because raters will allow a particular strength to color their view of other behaviors. To avoid this, try to think of specific behaviors relevant to each dimension rather than a global feeling towards the person. Chances are that each individual will have some areas in which they are stronger than other areas.

2. Before you make a rating, try to think about their performance over time rather than basing your rating on a single specific event. Although we are asking for specific examples to be provided, your rating should be based on the student’s behavior across the entire experience.

3. Avoid basing ratings on personal characteristics that are not related to the student’s effectiveness. For example, fashion sense, similarity to the rater, sense of humor and other characteristics can often influence opinions. While some of these things may be relevant to specific aspects of their performance (e.g., dressing professionally for meetings with clients), try not to let these things influence your ratings on dimensions for which they are not relevant.
Finally, we would like to express our appreciation and gratitude for your time and effort in helping the student’s professional development. This is a critical part of their education that could not be achieved without your assistance and effort.

Thank you,

Coordinator, General Concentration
Health Psychology Program
University of North Carolina Charlotte

<thead>
<tr>
<th>Elements</th>
<th>Unacceptable (U)</th>
<th>Acceptable (A)</th>
<th>Target (Publishable) (T)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Statement of the Problem</strong></td>
<td>No evidence was provided to support the significance of the study. The problem/project is not relevant to the field of health psychology broadly defined and to other health-related disciplines. A description of the approach for investigating the problem is not provided or it is incomplete.</td>
<td>The study is relevant to the field of health psychology broadly defined and to other health-related disciplines. There is adequate evidence provided to support the significance of the problem. The approach for investigating the problem is appropriate.</td>
<td>The study has a strong theoretical basis and the findings can be generalized to other populations. Abundant and compelling evidence was provided to support the significance of the study for the field of health psychology broadly defined to other health-related disciplines. The proposed work has the potential to make a significant contribution to the field.</td>
</tr>
<tr>
<td><strong>Review of Literature</strong></td>
<td>The material reviewed is not relevant to the goals/focus of the study. The material reviewed is out of date, omits seminal work, is insufficient, or the quality of is marginal or not appropriate for scientific research.</td>
<td>The introduction is well organized, integrates findings from several sources. The review is thoughtful and provides clarification of the area of study and supports the chosen methodology. Articles are relevant, timely, and seminal, coming primarily from primary sources.</td>
<td>Extensive review that includes summaries, synthesis, and critiques of rigorous evidence-based sources. The review provides strong support for the aims of the project and the research design and methodology selected.</td>
</tr>
<tr>
<td><strong>Methodology</strong></td>
<td>Significant aspects of the design and methodology are inappropriate for the problem under study. The discussion of reliability and validity of measurement is omitted, insufficient, or inaccurate.</td>
<td>The design and methodology are appropriate. The discussion of reliability and validity of measurement is correct and sufficient, with problems having been identified.</td>
<td>Study design and methodology are appropriate and represent the quality necessary for publication in a peer-reviewed journal. The reliability and validity of measurement are clearly described.</td>
</tr>
<tr>
<td><strong>Data Analysis and Findings</strong></td>
<td>The analysis are not appropriate or accurately described. Major errors in data analyses or reporting of findings were made. Inappropriate interpretation of the results.</td>
<td>The analyses are reported and accurately described. Few errors in data analyses and reporting of findings. Maintains distinctions between data and interpretations.</td>
<td>Reports data analyses with a level of clarity and accuracy necessary for publication in a refereed journal or other publication outlet.</td>
</tr>
<tr>
<td><strong>Interpretations, Conclusions, and Implications</strong></td>
<td>Draws unrelated, inaccurate, or overstated conclusions. Stated limitations of the study are inaccurate or insufficient. Implications for future research and practice in the field of health psychology broadly defined and to the student’s specialty area (i.e., general, clinical, community) are either omitted, insufficient, or unrelated to the findings or to the limitations of the study.</td>
<td>Draws accurate conclusions from the data. Stated limitations of the study are appropriate. Implications for future research and practice in the field of health psychology and to the student’s specialty area (i.e., general, clinical, community) are thoughtful and appropriately related to the findings or the limitations in the study.</td>
<td>Conclusions are accurate, appropriately linked to the problem and methodology. Implications for future research and practice in the field of health psychology and to the student’s specialty area (i.e., general, clinical, community) are thoughtful and appropriately related to the findings or the limitations in the study.</td>

**Oral component**

**Content:** The presentation had significant errors or omissions. Responses to questions were inappropriate or demonstrated lack of understanding of the literature and study findings.  
**Delivery:** The presentation did not follow a logical sequence. The presentation was not well paced. The presenter did not demonstrate confidence and/or ability to engage the audience.

**Content:** The presentation had few errors or omissions. Responses to questions were appropriate or demonstrated a good understanding of the literature and study findings.  
**Delivery:** The presentation followed a logical sequence. The presentation was well paced. The presenter demonstrated confidence and/or ability to engage the audience.

**Content:** The presentation was accurate and comprehensive. Responses to questions were appropriate or demonstrated an in-depth understanding of the literature and study findings.  
**Delivery:** The presentation followed a logical sequence. The presentation was well paced. The presentation was of professional quality and served as a model for other students.
The Health Psychology Ph.D. program conducts an annual evaluation of student learning outcomes to determine the extent to which current curricula contributes to the development of key graduate student competencies. Please use the scoring rubrics provided to evaluate the Comprehensive Project of students for whom you have served as a member of his or her advisory committee. The information collected will help guide any efforts to strengthen or modify program curricula or procedures with the goal of better meeting the program’s educational mission.

<th>Unacceptable (U)</th>
<th>Acceptable (A)</th>
<th>Target (Publishable) (T)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Statement of the Problem</strong></td>
<td>No evidence was provided to support the significance of the study. The problem/project is not relevant to the field of health psychology broadly defined and to other health-related disciplines. A description of the approach for investigating the problem is not provided or it is incomplete.</td>
<td>The study is relevant to the field of health psychology broadly defined and to other health-related disciplines. There is adequate evidence provided to support the significance of the problem. The approach for investigating the problem is appropriate.</td>
<td>The study has a strong theoretical basis and the findings can be generalized to other populations. Abundant and compelling evidence was provided to support the significance of the study for the field of health psychology broadly defined and to other health-related disciplines. The proposed work has the potential to make a significant contribution to the field.</td>
</tr>
<tr>
<td><strong>Review of Literature</strong></td>
<td>The material reviewed is not relevant to the goals/focus of the study. The material reviewed is out of date, omits seminal work, or is insufficient. The quality of the material reviewed is marginal or not appropriate for scientific research.</td>
<td>The introduction is well organized, integrates findings from several sources. The review is thoughtful and provides clarification of the area of study and supports the chosen methodology. Articles are relevant, timely, and seminal, coming primarily from primary sources.</td>
<td>Extensive review that includes summaries, synthesis, and critiques of rigorous evidence-based sources. The review provides strong support for the aims of the project and the research design and methodology selected.</td>
</tr>
<tr>
<td><strong>Methodology</strong></td>
<td>Significant aspects of the design and methodology are inappropriate for the problem under study. The discussion of reliability and validity of measurement is omitted, insufficient, or inaccurate.</td>
<td>The design and methodology are appropriate. The discussion of reliability and validity of measurement is correct and sufficient, with problems having been identified.</td>
<td>Study design and methodology are appropriate and represent the quality necessary for publication in a peer-reviewed journal. The reliability and validity of measurement are clearly described.</td>
</tr>
<tr>
<td><strong>Data Analysis and Findings</strong></td>
<td>The analysis are not appropriate or accurately described. Major errors in data analyses or reporting of findings were made. Inappropriate interpretation of the results.</td>
<td>The analyses are reported and accurately described. Few errors in data analyses and reporting of findings. Maintains distinctions between data and interpretations.</td>
<td>Reports data analyses with a level of clarity and accuracy necessary for publication in a refereed journal or other publication outlet.</td>
</tr>
<tr>
<td><strong>Interpretations, Conclusions, and Implications</strong></td>
<td>Draws unrelated, inaccurate, or overstated conclusions. Stated limitations of the study are inaccurate or insufficient. Implications for future research and practice in the field of health psychology broadly defined and to the student’s specialty area (i.e., general, clinical, community) are either omitted, insufficient, or unrelated to the data.</td>
<td>Draws accurate conclusions from the data. Stated limitations of the study are appropriate. Implications for future research and practice in the field of health psychology and to the student’s specialty area (i.e., general, clinical, community) are thoughtful and appropriately related to the findings or the limitations in the study.</td>
<td>Conclusions are accurate, appropriately linked to the problem and methodology. Implications for future research and practice in the field of health psychology and to the student’s specialty area (i.e., general, clinical, community) are thoughtful and appropriately related to the findings or the limitations in the study.</td>

Psychological Test Materials
Guidelines

1. Test materials may only be used by students or faculty of the Health Psychology Program and the Psychology Department for research, teaching, and/or clinical practicum work. Because we pay by the administration for some testing software, please contact either the Dr. Amy Peterman (DCT) or Dr. Ryan Kilmer for permission to use computer scoring/interpretation programs.

2. Use of test materials must follow relevant APA ethical guidelines (see especially those governing Research and Publication and Assessment) which are available on-line (www.apa.org) or published in the December 2002 issue of the American Psychologist.

3. Copyright and test security issues should also be observed (see APA’s website). Given that some of the test materials and the computer on which we have testing software will be used by other folks, use initials rather than the person’s name to protect confidentiality.

4. All materials must be checked out at the time of use and checked back in when they are returned. There is a sign-up sheet posted in each room near each set of tests. Once you have checked out a test or computer, you are responsible for that item. Rooms where test materials are kept (Colvard 4126 and Colvard 4004) should remain locked at all times. The cabinets in Colvard 4126 should also remain locked.

5. If you use the last copy of a measure, please inform the DCT so that additional copies can be re-ordered. Also, if there are any tests that you think that we need, please let me know and I will try to facilitate acquiring them.

6. Please let the DCT know if you want to borrow the laptop in his office with the testing material on it. It is loaned out on a first-come first-serve basis.
Newer Assessment Materials

The materials below can be found in the filing cabinet in Colvard 4004. Items with an * are located on the bookcase in the same room. In addition to the tests below, one of the department laptops is loaded with the following testing software: Wisconsin Card Sorting Test, Conners’ Continuous Performance Test, Green’s Word Memory Test and Green’s Medical Symptom Validity Test. This computer is kept in the DCT’s office (4013) and is available for all to use. Logon is “psychwork” and password is “psychology.” A computer in the Health Psychology Resource Room has select scoring software (e.g., MMPI-2/MMPI-2-RF).

**WTAR**  Wechsler Test of Adult Reading

**Test Batteries/Kits**

These test batteries/kits are located in the testing closet (Colvard 4126) and some are used for Intellectual Assessment. Please be mindful of checking WAIS/WISC and Woodcock Johnson kits out during the Fall when students are using these for class. Also, please note that some of the WAIS-III kits will be destroyed as they are becoming obsolete.

Wechsler Memory Scale-IV* 2
Wechsler Preschool and Primary Scale of Intelligence-Revised 1
Woodcock Johnson Tests of Achievement -III with updated norms* 8

* = computer scoring available in George Demakis’ office.

**Old School Tests**

Several tests and related materials are located in two boxes in Colvard 4110 immediately to the right of the door and are primarily of historical interest. There are also some older test kits located in Colvard 4126 that are primarily of historical interest (e.g., WAIS-R), but should not be used clinically as they are obsolete.
